

PJ MAC HVAC Air Duct Cleaning Announces New Commercial HVAC White Glove Program

January 12, 2026

ALLENTOWN, PA - January 12, 2026 -
PJ MAC HVAC Air Duct Cleaning announced the launch of a new Commercial HVAC White Glove Program designed for facilities seeking structured and documented air duct cleaning services, with initial availability extending to commercial properties in eastern Pennsylvania. The program formalizes a standardized service process for commercial HVAC systems and was introduced in January 2026 as part of the company?s ongoing operational expansion, according to Doug Stiefel, a company representative.

?The White Glove Program was developed to establish a consistent framework for how commercial HVAC is performed and documented,? said Doug Stiefel of PJ MAC HVAC Air Duct Cleaning. ?The intent is to provide commercial property managers with clear procedures and reporting standards that align with internal maintenance and compliance requirements.?

PJ MAC HVAC Air Duct Cleaning operates as a specialized HVAC and air duct cleaning provider serving residential and commercial properties, with service operations that include scheduled maintenance and

system cleaning for occupied buildings. Established as a dedicated division focused on air conveyance systems, the company conducts on-site assessments, mechanical cleaning, and post-service documentation for HVAC infrastructure. Its commercial work includes offices, medical facilities, educational buildings, and mixed-use properties that require coordination with ongoing operations.

The newly announced Commercial HVAC White Glove Program introduces a defined service structure intended for organizations that require repeatable processes rather than one-time cleanings. The program includes pre-service planning, system isolation procedures, equipment staging protocols, and detailed service reporting following completion. These elements are intended to support facility maintenance records and internal review processes without altering existing HVAC system configurations.

Commercial HVAC systems differ from residential systems in scale, usage patterns, and regulatory considerations, particularly in properties with high occupancy or specialized environmental controls. PJ MAC HVAC Air Duct Cleaning has indicated that the White Glove Program was developed in response to requests from commercial clients seeking greater consistency in how air duct cleaning services are delivered across multiple locations or scheduled intervals. The program is structured to integrate with existing facility management workflows.

Operationally, the White Glove Program emphasizes controlled access to mechanical spaces and coordination with on-site personnel. Service teams follow predefined entry, containment, and equipment handling procedures intended to limit disruption within active commercial environments. Documentation generated through the program includes service summaries and visual records that can be retained for maintenance files or compliance reviews.

PJ MAC HVAC Air Duct Cleaning reports that the program is being implemented by trained technicians who focus exclusively on commercial HVAC from our Allentown PA service area . The company maintains dedicated equipment for negative air containment and mechanical agitation, which is deployed based on system design and site conditions. These operational details are standardized within the White Glove Program to promote uniform service execution across commercial projects.

While the program is designed for broader commercial applicability, initial deployment includes facilities in and around Allentown, Pennsylvania, where the company has an established service presence. PJ MAC HVAC Air Duct Cleaning has stated that additional markets may be added as operational capacity expands. The company employs multiple service teams to support scheduled commercial work alongside residential projects.

In addition to service execution, the White Glove Program places emphasis on communication before and after project completion. Pre-service coordination outlines access requirements and scheduling

considerations, while post-service communication provides facility representatives with documentation outlining the scope of work performed. These steps are intended to support transparency and internal reporting for property owners and managers.

PJ MAC HVAC Air Duct Cleaning was founded to provide focused air duct cleaning services separate from general HVAC installation or repair work. The company?s operations are centered on cleaning and maintenance of air conveyance components, including supply and return ductwork, registers, and related system elements. This specialization has informed the development of structured service programs such as the Commercial HVAC White Glove Program.
