

Muse Treatment Center Publishes New Resource Exploring Why People Struggle to Stop Using Drugs

September 18, 2025

LOS ANGELES, CA - September 18, 2025 -
Los Angeles, CA ? Muse Treatment Alcohol & Drug Rehab Los Angeles has announced the release of a new educational article titled ?Why Can?t I Stop Using Drugs???a piece designed to help the public better understand the complex psychological and physiological barriers that can make substance use disorder so difficult to overcome. The resource is part of Muse?s ongoing effort to publish accessible, research-informed content on the realities of addiction and recovery.

The article examines why many people, even when fully aware of the consequences, find it difficult to stop using substances such as opioids, stimulants, or benzodiazepines. Drawing from addiction science and clinical experience, it outlines how brain chemistry, emotional trauma, and behavioral conditioning all play a role in long-term substance use. By helping readers grasp the deeper roots of addiction, the article encourages a more compassionate, informed approach to recovery?for individuals and their families alike.

Muse Treatment Center, located in Los Angeles, has become a regional leader in evidence-based care for

those seeking recovery from drug and alcohol addiction. The facility offers a comprehensive range of treatment services, including medical detoxification, inpatient residential treatment, outpatient support, and long-term aftercare. Treatment plans are individualized to address the medical, emotional, and psychological dimensions of addiction.

Rather than approaching substance use solely as a behavioral issue, Muse emphasizes a model that integrates clinical therapy, neurobiological insight, and trauma-informed care. This mirrors the approach explored in the article, which suggests that understanding why a person cannot stop using drugs is just as important as developing a strategy for how to stop.

The center?s programming includes medically supervised detoxification for alcohol, opioids, prescription drugs, and other substances. Following detox, patients transition into structured treatment environments where they participate in group therapy, individual counseling, cognitive behavioral therapy (CBT), dialectical behavior therapy (DBT), relapse prevention education, and holistic services that support long-term health and recovery.

Muse Treatment?s reach extends beyond the city center, serving patients from high-value and surrounding neighborhoods such as Brentwood, Beverly Hills, Studio City, Pasadena, Encino, and Hancock Park. The center?s location makes it a convenient option for those searching ?rehabs near me? while still offering the privacy and structure essential to recovery. Its accessibility has positioned it as a reliable choice for patients throughout the Los Angeles metro area.

The newly published article also touches on the emotional cycle that can develop during active addiction?particularly shame, denial, and fear of withdrawal?which often prevents people from seeking help even when the desire to stop is strong. Muse Treatment Center addresses these challenges by offering a supportive clinical setting where patients are met with understanding and individualized care, reducing the barriers to taking the first step toward sobriety.

This publication reflects Muse?s ongoing commitment to educating the public on the underlying causes of addiction, bridging the gap between clinical knowledge and community understanding for those impacted by substance use across Los Angeles and surrounding neighborhoods.

As part of its community outreach and educational mission, Muse continues to release articles that address common questions about addiction, mental health, and treatment. The goal is to provide trusted resources that promote public awareness, reduce stigma, and encourage earlier intervention.
