

Fito Plumbers, Inc. Expands Specialized Sewer Lateral Services to Meet Stringent Requirements

September 22, 2025

LIVERMORE, CA - September 22, 2025 -

Fito Plumbers, Inc., a Bay Area plumbing contractor headquartered in Livermore, California, has expanded its sewer lateral services to San Leandro residents, addressing a critical gap in available contractors who meet the city's exceptionally high insurance and licensing requirements.

San Leandro maintains some of the most rigorous contractor requirements in the Bay Area, mandating \$6 million in insurance coverage for sewer lateral work—three times the \$2 million requirement of most neighboring municipalities. This elevated standard has significantly limited the pool of qualified contractors available to San Leandro homeowners facing sewer infrastructure challenges.

Fito Plumbers, Inc. already maintained the comprehensive insurance coverage and specialized expertise required by San Leandro's municipal code, positioning the company to serve residents who have struggled to find qualified contractors for essential sewer lateral replacement projects. The expansion represents a strategic response to community needs in a market where few contractors can meet the stringent regulatory

requirements.

"San Leandro homeowners deserve access to qualified contractors who can handle complex sewer lateral projects while meeting all municipal requirements," said Rosy Lopez, a spokesperson at Fito Plumbers, Inc. "Our existing insurance coverage and technical capabilities align perfectly with the city's standards, allowing us to fill this service gap without compromising on quality or compliance."

The company's sewer lateral services encompass three primary categories: main sewer lateral replacement, crawlspace drain modernization, and lower lateral replacement. Each project utilizes trenchless technology whenever feasible, minimizing disruption to existing landscaping and hardscaping while ensuring superior installation quality. This approach reduces restoration costs and project timelines compared to traditional excavation methods.

Beyond technical execution, Fito Plumbers, Inc. manages all aspects of regulatory compliance for San Leandro sewer lateral projects. The company handles permit acquisition, coordinates required traffic control measures, and ensures proper restoration of all affected surfaces to original condition. This comprehensive approach eliminates the administrative burden for property owners while ensuring full compliance with municipal codes.

The timing of this service expansion addresses growing infrastructure concerns across San Leandro, where aging sewer laterals increasingly require replacement or significant repairs. Many properties in the area feature sewer laterals installed decades ago, now reaching the end of their functional lifespan and requiring professional intervention to prevent costly failures.

San Leandro's elevated insurance requirements reflect the city's commitment to protecting residents from potential liabilities associated with sewer lateral work. The work often involves excavation near public utilities, street work, and coordination with municipal sewer systems, creating potential risks that require substantial insurance coverage to adequately protect all parties involved.

Fito Plumbers, Inc. operates from locations in Livermore and Hayward, California, serving residential and commercial clients throughout the San Francisco Bay Area. The company provides comprehensive plumbing services, including industrial and commercial plumbing, professional leak detection, horizontal directional drilling, and water heater installation and maintenance. As a licensed, bonded, and insured contractor, the company maintains the certifications and coverage necessary to work across multiple Bay Area municipalities with varying regulatory requirements.
