

Spray Foam Insulation Services Expand with New Energy-Saving Options

September 30, 2025

MARIETTA, OH - September 30, 2025 -
Ohio Valley Spray Foam, owned by Joshua Wiethe, has announced the expansion of its spray foam insulation services to Charleston, WV. The move comes as property owners prepare for the colder months ahead, with increasing demand for energy-efficient and cost-saving insulation solutions.

The expansion makes professional spray foam installation more accessible to residential, commercial, and industrial customers in Charleston, WV and the surrounding communities. With rising energy costs and growing awareness of environmental responsibility, insulation upgrades are becoming a priority for property owners seeking to lower heating expenses and improve indoor comfort.

According to the U.S. Department of Energy, heating and cooling account for about 55% of energy use in the average home, making it the largest energy expense for most households. Proper insulation can reduce heating and cooling costs by up to 20%, depending on the home?s age and condition. Spray foam insulation, in particular, creates an air-tight barrier that minimizes energy loss, improves indoor air quality, and offers

greater efficiency than fiberglass or cellulose.

Fall is widely considered the best time of year for insulation improvements. Cooler temperatures and reduced humidity levels make the installation process easier and help ensure better long-term performance. By scheduling insulation upgrades before winter, property owners can enter the coldest months with greater energy savings and improved comfort throughout their buildings.

Spray foam differs from traditional materials by expanding to fill cracks, gaps, and hard-to-reach spaces that fiberglass batts or blown-in insulation often leave exposed. This performance advantage makes it suitable not only for residential homes but also for commercial facilities and industrial buildings where controlling temperature, moisture, and air leakage is critical.

?Expanding our services to Charleston, WV allows us to meet the needs of a growing number of property owners who want efficient, reliable insulation before winter sets in,? said Joshua Wiethe, owner of Ohio Valley Spray Foam. ?Spray foam offers measurable benefits, from reduced energy bills to year-round comfort, and we are proud to make these solutions available to more customers in the region.?

Beyond energy savings, spray foam insulation provides long-term value by extending the life of HVAC systems, reducing wear and tear caused by constant heating and cooling cycles. Because spray foam creates a more stable indoor environment, heating and cooling equipment does not have to work as hard to maintain consistent temperatures. This reduced strain can translate into fewer repairs, lower maintenance costs, and an overall longer system lifespan, offering property owners measurable financial benefits beyond energy bill reductions.

For commercial and industrial facilities, insulation improvements can also play a key role in environmental control. Spray foam helps regulate interior conditions by reducing unwanted airflow, limiting moisture intrusion, and creating barriers against dust and allergens. These benefits are particularly important for businesses that depend on protecting sensitive equipment, perishable materials, or production processes from temperature swings and humidity issues. By maintaining more consistent conditions, companies can reduce the risk of product damage, equipment failure, and costly downtime.

Project timing and accessibility remain important factors when planning insulation upgrades. Completing installation in the fall provides a strategic advantage, giving property owners the opportunity to address energy loss before the heaviest demand for heating begins. This timing also allows contractors greater scheduling flexibility compared to the peak of winter, when service requests often increase and weather conditions may cause delays.

For existing structures, spray foam can be installed in attics, crawl spaces, wall cavities, and basements,

sealing areas where traditional insulation may have deteriorated or left gaps. The application process is efficient and minimally disruptive, making it possible to complete upgrades without extensive demolition or remodeling. In new construction, spray foam can be integrated during the building phase, where it provides a seamless envelope that enhances overall efficiency from the start. This dual application effective for both retrofits and new builds makes spray foam one of the most versatile insulation solutions available today.

Ohio Valley Spray Foam in Charleston, WV, serves customers throughout the Ohio Valley region. The company?s expansion represents its commitment to meeting broader demand for reliable, energy-efficient insulation solutions across multiple property types.

With the service expansion now in place, Charleston, WV property owners are encouraged to explore the benefits of spray foam insulation before the onset of winter. For more details or to schedule a consultation, contact the company directly.
