

Expanded Roof Insulation Services Aim to Improve Energy Savings

October 15, 2025

Spring Creek, NV - October 15, 2025 -
Nevada Urethane, owned by Michael Minton, has announced the expansion of its professional roof insulation services to Twin Falls, ID. The company, known for providing high-performance spray foam solutions in Nevada, is extending its reach to help Utah homeowners and businesses improve energy efficiency ahead of the colder months. This move comes as energy costs continue to rise and property owners look for practical ways to reduce heating expenses before winter.

With the addition of Twin Falls, ID to its service area, Nevada Urethane aims to support residential, commercial, and industrial clients seeking to upgrade their insulation systems. Spray foam insulation is widely recognized for its ability to seal gaps, prevent air leaks, and provide long-term protection against temperature fluctuations. According to the U.S. Department of Energy, proper insulation can reduce heating and cooling costs by up to 20%, making it one of the most effective ways to improve a building?s overall efficiency.

The expansion aligns with the company?s mission to deliver durable insulation solutions that combine

cost-effectiveness with performance. Spray foam, unlike traditional fiberglass or cellulose insulation, adheres directly to surfaces and forms a continuous barrier that minimizes energy loss. This characteristic makes it particularly effective for roof applications, where air infiltration and poor insulation often contribute to higher utility bills.

Fall is an ideal time to schedule insulation projects. The moderate weather allows contractors to complete installations efficiently, while property owners can prepare their buildings before temperatures drop. Addressing insulation during this period ensures that energy savings are realized throughout the entire winter season. As Twin Falls faces its typical cold and snowy winter, upgraded insulation can make a noticeable difference in both comfort and heating costs.

The benefits of spray foam extend beyond energy savings. It also helps regulate indoor humidity, reduces noise, and strengthens the structural integrity of roofs by adding an extra layer of support. For commercial and industrial properties, spray foam insulation contributes to consistent indoor temperatures that protect equipment and inventory. In residential settings, homeowners often notice improved comfort and fewer drafts within days of installation.

Michael Minton, owner of Nevada Urethane, said, ?Expanding to Twin Falls is an exciting step for us. Our goal is to help more property owners achieve real, measurable improvements in their energy use. Fall is the perfect time to prepare buildings for the winter ahead, and spray foam offers lasting benefits that traditional insulation materials simply can?t match.?

Insulation projects are best planned with timing, accessibility, and long-term return in mind. Proper scheduling ensures minimal disruption to daily operations for commercial clients and quick turnaround for homeowners. Since spray foam insulation can last for decades with minimal maintenance, it?s often viewed as a one-time investment that pays for itself over time through lower energy bills and enhanced comfort.

Nevada Urethane in Twin Falls, continues to provide solutions that support sustainable, energy-efficient construction practices. The company?s experienced team uses proven materials and application methods designed to meet modern performance standards for both new builds and retrofit projects.

With its latest expansion, the company encourages Utah residents and business owners to consider upgrading their roof insulation before winter arrives. Investing in spray foam now can lead to reduced heating costs, fewer maintenance concerns, and improved indoor comfort throughout the season.
