Bugworks Pest Control Highlights Scorpion Exterminator Services in The Desert

September 22, 2025

LAS VEGAS, NV - September 22, 2025 -
Bugworks Pest Control, a family-owned pest control company serving the Las Vegas Valley since 2001, is reminding residents about the importance of professional scorpion control as warmer weather increases pest activity throughout the region.

The company, which maintains a 5.0 rating based on 132 customer reviews, specializes in comprehensive scorpion detection and elimination services for both residential and commercial properties. As desert temperatures climb, scorpions become more active in their search for water and shelter, often leading them into homes and businesses.

"Scorpions are particularly challenging pests in our desert environment because they can survive extreme conditions and often hide in places people don't expect," said Rich Lucero, owner of Bugworks Pest Control. "Our team has developed specialized techniques over the past two decades to effectively locate and eliminate scorpion populations while ensuring the safety of families and pets."

The company's scorpion control program includes thorough property inspections, identification of entry points, targeted treatment applications, and ongoing prevention strategies. Technicians are trained to recognize the specific scorpion species common to Southern Nevada, including the bark scorpion, which is the most venomous species found in North America.

Bugworks Pest Control serves Boulder City, Henderson, Paradise, Spring Valley, Enterprise, and surrounding communities. The company emphasizes eco-friendly treatment options that minimize environmental impact while maintaining effectiveness against pest populations.

Recent customer feedback, including a newly posted 5-star review, highlights the professionalism and dependability that customers have come to expect from the local pest control provider.

"We understand that finding a scorpion in your home can be alarming, which is why we make ourselves available from early morning to evening hours every day of the week," added Lucero. "Our goal is to provide peace of mind through effective pest control solutions and responsive service."

Bugworks Pest Control scorpion extermination service offers customized treatment plans based on each property's unique characteristics and pest pressures. The company's approach includes sealing potential entry points, removing harborage areas, and applying targeted treatments in areas where scorpions are likely to travel.

Bugworks Pest Control also provides comprehensive pest management services beyond scorpion control, including treatments for rodents, cockroaches, and general household pests. The company offers both one-time services and ongoing protection plans designed to maintain pest-free environments throughout the year.

Established in 2001, Bugworks Pest Control has built its reputation on providing effective pest control services without upselling unnecessary treatments. The locally owned and operated company stands behind its work with a satisfaction guarantee, offering free re-treatment if pests return between scheduled appointments. The company serves both residential and commercial clients throughout the Las Vegas Valley with customized pest management solutions.
