

Microsurgical Vasectomy Reversals by Dr. Mark Hickman Expands Surgery Services Nationwide

September 30, 2025

New Braunfels, TX - September 30, 2025 -
Microsurgical Vasectomy Reversals by Dr. Mark Hickman announces the expansion of specialized vasectomy reversal services to patients across the United States, building on 26 years of microsurgical expertise and thousands of successful procedures.

The New Braunfels, Texas-based practice now accommodates patients from all 50 states, offering comprehensive microsurgical vasectomy reversal procedures with transparent, all-inclusive pricing. The expansion responds to growing demand from men seeking to restore fertility after vasectomy, with patients increasingly traveling from Louisiana, Oklahoma, and beyond for the specialized service.

"After performing thousands of vasectomy reversals over 26 years, I've witnessed the profound impact this procedure has on families," said Dr. Mark Hickman, microsurgical specialist. "The expansion of our services nationwide ensures more men have access to this life-changing surgery, regardless of their location."

The practice offers two comprehensive surgical options to accommodate different patient needs. The first option, priced at $3,300, includes local anesthesia and oral sedation. The second option, at $4,200, features IV sedation administered by a board-certified anesthesiologist. Both packages include all surgical fees with no hidden costs, addressing a common concern among patients researching reversal options.

Dr. Mark Hickman, the practice's founder and lead microsurgeon, emphasizes that a vasectomy can be reversed through advanced microsurgical techniques. The procedure involves precise repair of the vas deferens using a powerful operating microscope and fine nylon sutures, creating careful alignment and watertight closure for optimal success rates.

To support out-of-town patients, the practice provides assistance with travel arrangements and discounted accommodations in the New Braunfels area. Free consultations allow prospective patients to discuss their individual situations and understand the procedure before making decisions.

The microsurgical technique employed focuses on creating direct alignment of the vas deferens lumen and achieving a watertight closure. This meticulous approach, refined over thousands of procedures, aims to maximize the potential for restored fertility. The practice maintains detailed information resources, including frequently asked questions and patient testimonials, to help individuals make informed decisions about their reproductive health.

"The decision to reverse a vasectomy often represents a significant life change for our patients," noted Dr. Hickman. "Our commitment extends beyond the surgical procedure itself to ensuring patients receive comprehensive support throughout their journey."

The nationwide expansion comes as demand for vasectomy reversal procedures continues to grow across the United States. Men seek reversals for various reasons, including remarriage, changes in family planning decisions, or addressing post-vasectomy complications.

Microsurgical Vasectomy Reversals by Dr. Mark Hickman specializes exclusively in vasectomy reversal procedures, utilizing advanced microsurgical techniques developed over more than two decades of focused practice. The practice has facilitated thousands of successful reversals, contributing to numerous births and helping couples achieve their family planning goals. Based in New Braunfels, Texas, the practice serves patients from across the United States with comprehensive surgical options and transparent pricing structures.
