

# Mindmachines.com Updates High Tech Meditation Tool for Enhanced Mental Performance

*September 30, 2025*

Dallas, Texas - September 30, 2025 -
Mindmachines.com has announced the release of its third-generation ROSHIwave IN-SIGHT Mind Machine, incorporating updated protocols and enhanced navigation features designed to guide users into deep meditative states typically achieved by experienced Zen practitioners.

"The third-generation ROSHIwave represents a significant advancement in brainwave modulation technology," said Fred Williams, a spokesperson for Mindmachines.com. "By incorporating the pROSHI 2++ protocols developed by the late Chuck Davis, we have expanded the device's capabilities to address various mental states and performance objectives more effectively than previous models."

The device utilizes advanced photostimulation technology to normalize brainwave patterns through a process called Dynamic Neuro-Activation. The device delivers precisely calibrated flickering light patterns via specialized RGB LED glasses, allowing users to reach profound states of mental clarity and relaxation within 15-minute sessions.

The updated system features improved navigation and multiplexed protocol versions that enhance user experience and therapeutic applications. Nearly 100 clinicians worldwide currently integrate ROSHIwave technology into their practices for stress management, enhanced learning, behavioral modification, and performance optimization.

The high tech meditation tool employs Brainwave DisEntrainment through Photostimulation, a method that differs from traditional entrainment approaches by freeing the mind from repetitive patterns rather than synchronizing to specific frequencies. This approach helps users break free from unhealthy cyclical thought patterns and achieve mental states conducive to various wellness and performance goals.

The ROSHIwave IN-SIGHT operates as a pocket-sized, USB-rechargeable device that functions similarly to a click-wheel mp3 player. The complete system includes the ROSHIwave Console, color-changing RGB RoshiGlasses, a Ganzfeld RoshiVisor, USB charger and cable, and a carrying case. The device incorporates comprehensive safety features and usage guidelines, with specific warnings against use by individuals with seizure disorders.

The third-generation model builds upon decades of research in brainwave entrainment technology, incorporating classic ROSHI-style protocols alongside newly developed multiplexed versions. These enhancements provide practitioners and individual users with expanded options for addressing different mental states and achieving specific performance objectives.

Applications for the technology extend across multiple domains, including education, biofeedback therapy, stress reduction, and personal wellness programs. Performance coaches and wellness professionals have integrated the device into their practices as a technological aid for meditation and mental optimization.

Mindmachines.com, operated by Av3X LLC and based in Dallas, Texas, specializes in the distribution of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, and meditation machines. The company serves as the worldwide distributor of the ROSHIwave self-meditation device, providing advanced brainwave modulation technologies designed to enhance mental performance, wellness, and personal achievement through scientifically developed protocols and cutting-edge photostimulation methods.
