

Fito Plumbers, Inc. Second Office Announces Enhanced Sewer Lateral Services

September 26, 2025

LIVERMORE, CA - September 26, 2025 -
Fito Plumbers, Inc. has announced the expansion of specialized sewer lateral services in San Leandro from its Hayward office, addressing increasing infrastructure demands across East Bay communities. The Hayward location, one of two company facilities serving the San Francisco Bay Area, has enhanced its operational capacity to handle complex sewer lateral replacement projects requiring specialized equipment and technical expertise.

The announcement comes as East Bay municipalities report rising demand for sewer infrastructure work, with many residential properties requiring updates to aging lateral systems installed decades ago. The Hayward office has expanded its technical team and equipment inventory to accommodate the growing number of projects requiring trenchless technology and compliance with varying municipal codes across different jurisdictions.

"Our Hayward office serves as a strategic hub for East Bay operations, allowing us to respond more

efficiently to sewer lateral replacement needs throughout the region," said Rosy Lopez, a Spokesperson for Fito Plumbers, Inc. "The enhanced capabilities at this location enable us to deploy specialized equipment and crews directly to project sites while maintaining compliance with each municipality's specific requirements."

The Hayward facility now maintains expanded inventory for three primary service categories: main sewer lateral replacement, crawlspace drain modernization, and lower lateral replacement. Each service category requires specific equipment configurations and technical expertise, particularly when implementing trenchless installation methods that preserve existing landscaping and hardscaping. The office coordinates permitting processes across multiple East Bay jurisdictions, each with distinct requirements for insurance coverage, licensing, and restoration standards.

From the Hayward location, Fito Plumbers, Inc. manages projects requiring horizontal directional drilling technology, a method increasingly requested for installations beneath established structures and mature landscaping. The facility houses specialized drilling equipment and maintains crews trained in this non-invasive installation technique, which allows for pipe placement with minimal surface disruption.

The company's Hayward operations complement its Livermore headquarters, creating comprehensive coverage across the Bay Area. This dual-location strategy enables faster response times for emergency sewer lateral services while maintaining the specialized equipment and expertise required for complex infrastructure projects. The Hayward office handles industrial and commercial plumbing projects in addition to residential sewer lateral work, serving properties ranging from single-family homes to large commercial facilities.

Recent infrastructure assessments indicate that many East Bay sewer laterals require replacement due to material deterioration, root intrusion, and shifting soil conditions common to the region. The Hayward office maintains diagnostic equipment for professional leak detection and system evaluation, allowing property owners to identify issues before they escalate into emergency situations.

Fito Plumbers, Inc. operates as a licensed, bonded, and insured plumbing contractor meeting the requirements of Bay Area municipalities. The company provides comprehensive plumbing services, including water heater installation and maintenance, sewer repair, and manhole rehabilitation. With offices in both Hayward and Livermore, the company serves residential and commercial properties throughout the San Francisco Bay Area, maintaining the certifications and insurance coverage required by various municipal codes.
