

## **Sun-Wind Solutions Announces That The Federal Solar Tax Credit Extension Will Affect Local Businesses**

*February 29, 2016*

February 29, 2016 - PRESSADVANTAGE -

Sun-Wind Solutions LLC in Fairfield, CT, has announced to prospective clients, including home owners and commercial businesses, that the federal tax credit for solar has been recently extended. This means that businesses have even more incentive to adopt solar energy to save costs and employ renewable energy sources.

Bill Giglio, spokesperson for the company states, "The ITC is an important policy, particularly to businesses." The Solar Investment Tax Credit provides business certainty to project developers and investors, and continues to drive growth and job creation, as it motivates businesses to take advantage of solar energy.

Commercial solar installers like Sun-Wind Solutions LLC are working with businesses in their areas to try to get them to switch over to solar energy while they can still take advantage of the tax credit. In <https://www.technologyreview.com/s/544981/tax-credit-extension-gives-solar-industry-a-new-boom/>, it states that the extension will create a major growth for the solar industry.

Those who are interested in learning more about the solar investment tax credit can do so at

<http://www.seia.org/policy/finance-tax/solar-investment-tax-credit>. In short, extending the ITC amount to an additional 69 GW of solar deployment between 2016 and 2022 is expected. If extended, it is expected that more than 95 GW of solar power will be installed in the United States by 2022, which will generate more than 144 terawatt hours of electricity every year, which is enough electricity to power 19 million homes. This would also mean that solar energy would account for more than 3 percent of all the electricity generated in the United States. As of 2010, that number was less than 1 percent.

Sun-Wind Solutions meets with clients onsite and discusses their commercial solar power options, helping them to determine the electricity they are currently using and their goals for the future. The company provides a solar site study with state of the art equipment to determine how viable solar energy will be for each business in their specific location.

Once a determination is made, the company can design a custom solar PV system to fit the specific needs of each organization. Those interested in learning more can do so on the company's official website or contact them directly to schedule an onsite solar power consultation.
