

Go Industries Expands ET008 Grille Guard Line for Medium Duty Commercial Trucks

October 24, 2025

Richardson, TX - October 24, 2025 -
Go Industries has expanded its winch-compatible grille guard offerings for medium duty commercial trucks, addressing the growing demand for heavy-duty protection solutions in the commercial trucking sector. The expanded line features the ET008 grille guard system designed specifically for Chevrolet C4500, C6500, Ford F650, F750, and International CV515 vehicles.

The Richardson, Texas-based manufacturer has enhanced its commercial vehicle protection portfolio with grille guard systems that require no cutting or drilling during installation. The expanded offerings feature articulating designs that accommodate tilt body configurations, allowing the guards to move forward for convenient hood access while maintaining secure mounting through dual OEM-style latches and safety pins.

"Commercial fleet operators have been requesting more versatile protection options that don't compromise vehicle accessibility or require permanent modifications," said a Go Industries spokesperson. "Our expanded grille guard line addresses these needs while maintaining the durability standards our customers expect from

American-made truck protection equipment."

The ET008 grille guard incorporates a winch tray capable of supporting up to 16,500-pound capacity winches from various manufacturers. The fully welded construction features headlight brush guards built from 1.9-inch, 14-gauge tubing paired with 2.5-inch center cross tubes. The center screen utilizes laser-cut 18-gauge material for optimal protection without restricting airflow to the radiator.

Each unit receives a black textured powder coat finish designed to withstand harsh commercial operating conditions. The manufacturing process takes place entirely at the company's Texas facility, ensuring quality control throughout production.

The expansion complements Go Industries' existing commercial vehicle protection portfolio, which includes headache racks, mud flaps, bumper replacements, and specialized law enforcement vehicle equipment. The company has served the commercial trucking, fleet, and law enforcement sectors since 1978, developing protection solutions that address the specific challenges faced by professional drivers and fleet managers.

Commercial trucking operations face increasing pressure to protect vehicles from road hazards while maintaining accessibility for routine maintenance and emergency repairs. The articulating design of the expanded grille guard line allows technicians to access engine compartments without removing protection equipment, reducing maintenance time and improving fleet efficiency.

The winch compatibility feature addresses another critical need in commercial trucking operations, particularly for vehicles operating in construction, recovery, and utility service applications. The universal winch tray design accommodates equipment from multiple manufacturers, providing fleet managers with flexibility in equipment selection.

Go Industries backs the expanded grille guard line with comprehensive warranty coverage and technical support services. The company maintains inventory for immediate shipment to commercial customers and authorized dealers throughout North America.

Established in 1978, Go Industries manufactures truck protection equipment including grille guards, headache racks, bumper replacements, mud flaps, and specialized law enforcement vehicle accessories. The company holds Platinum Status with SEMA and operates manufacturing facilities in Richardson, Texas.
