

## **Anderson Lighting & Electric Expands Electrical Panel Upgrades, Repairs, and Replacement Services**

*September 29, 2025*

September 29, 2025 - PRESSADVANTAGE -

As fall arrives in 2025, Anderson Lighting & Electric announces electrical panel upgrades, electrical panel repairs, and electrical panel replacement services expansion. The company's initiative reflects the growing demand for reliable electrical service in an area that has seen steady residential growth, aging infrastructure, and increased seasonal electricity use.

Electrical panels, often called breaker boxes, are the foundation of any property's power system. They regulate electricity distribution throughout a home or business, ensuring that circuits operate safely and reliably. In Flower Mound and its surrounding towns, homes vary from older properties built decades ago to new construction designed to accommodate modern technology. For many residents, the condition of their electrical panels has become a pressing concern, particularly as cooler weather shifts demand to heating systems, seasonal appliances, and extended use of lighting.

Jeffrey Bernal, owner of Anderson Lighting & Electric in Flower Mound, emphasized the importance of

expanding locally to address this need. "Flower Mound and the surrounding area have a unique mix of properties, from historic neighborhoods to brand-new developments," Bernal said. "No matter the age of a home, electrical panels need to be safe and capable of handling today's power demands. Expanding our electrical panel upgrades and repairs here ensures local residents have access to timely, professional solutions before peak seasonal use places additional stress on their systems."

The towns adjacent to Flower Mound each present their own challenges. Highland Village and Coppell have many homes built in the 1980s and 1990s, where panels may no longer meet modern code requirements. Lewisville and Grapevine contain both older residences and commercial buildings where frequent breaker trips or overheating panels are becoming increasingly common. Meanwhile, rural communities such as Double Oak and Bartonville often feature custom-built properties that require tailored solutions, from electrical panel repairs to complete electrical panel replacement.

As North Texas enters the fall season, these communities experience increased electrical demand from HVAC systems shifting between cooling and heating, along with higher energy use from holiday gatherings, decorative lighting, and kitchen appliances. This combination can expose weaknesses in electrical distribution systems that may not have been noticeable during lighter summer usage. For residents, ensuring that panels are inspected, upgraded, or replaced in advance of seasonal stress has become an important safety step.

Anderson Lighting & Electric's service expansion in Flower Mound and nearby areas focuses on three central needs: targeted electrical panel repairs for minor issues that can be corrected, electrical panel upgrades to meet higher capacity or new safety standards, and full electrical panel replacement where existing units are outdated or beyond repair. Technicians conduct thorough evaluations to determine whether a simple adjustment, a new breaker, or an entirely new panel is the most reliable and cost-effective option for property owners.

Bernal highlighted how small issues can indicate bigger risks. "In Flower Mound, we often see homes where breakers trip when the HVAC system kicks on or lights flicker during appliance use," he explained. "Those are early warning signs. By addressing electrical panel repairs early, property owners can avoid much larger problems down the road, including potential fire hazards or full system failures."

Seasonal weather patterns in North Texas further underscore the importance of reliable electrical panels. While fall typically brings milder temperatures, it also serves as the lead-up to winter months where ice storms and cold snaps can stress local power systems. For homes in Highland Village, Coppell, or Grapevine, where many families rely on both gas and electric heating systems, ensuring electrical panels are up to date reduces the risk of outages during these critical times.

Another factor driving the need for electrical panel upgrades and replacements in the Flower Mound area is ongoing residential development. Many families moving into the region are investing in electric vehicle chargers, advanced HVAC systems, and smart home technology, all of which increase the demand on electrical systems. Older panels, particularly those installed more than three decades ago, were not designed with these modern requirements in mind. Without upgrades, homeowners may find themselves facing frequent interruptions or being out of compliance with updated codes.

The company also points to increasing concerns about property value and safety inspections. Electrical systems are a common point of evaluation during home sales in Flower Mound, Lewisville, and Coppell, making panel condition a factor that can directly affect marketability. An electrical panel replacement not only ensures compliance with modern safety standards but also reassures potential buyers about the long-term reliability of the home.

Anderson Lighting & Electric has also noted that holiday seasons are an especially busy time for electrical calls. The combined use of decorative lighting, cooking appliances, and extended gatherings often places unexpected pressure on older panels. Families in Double Oak and Bartonville, where larger custom homes are common, frequently see the need for electrical panel upgrades to manage the additional demand from both seasonal and year-round activities.

Bernal summarized the expansion as a community-centered initiative. "For Flower Mound and its neighbors, this isn't just about fixing panels," he said. "It's about making sure families and businesses can rely on their electrical systems through the seasons ahead. Whether it's a small repair, a panel upgrade, or a full replacement, we want residents to have confidence that their property is safe and prepared for today's electrical demands."

As Flower Mound and surrounding towns continue to grow, the need for safe, reliable, and up-to-date electrical systems has become more urgent. By expanding its electrical panel upgrades, electrical panel repairs, and electrical panel replacement services locally, Anderson Lighting & Electric is positioning itself to meet that demand in a timely and practical way.
