

Microsurgical Vasectomy Reversals by Dr. Mark Hickman Expands Services to Meet National Demand

October 10, 2025

New Braunfels, TX - October 10, 2025 -
Microsurgical Vasectomy Reversals by Dr. Mark Hickman announces expanded service capacity to accommodate increasing patient demand from across the United States. The New Braunfels, Texas-based practice, led by microsurgical specialist Dr. Mark Hickman, has enhanced its operational capabilities to serve patients from all 50 states seeking to restore fertility after vasectomy.

The expansion responds to a significant increase in consultations from men nationwide who wish to reverse a vasectomy following life changes such as remarriage or decisions to expand their families. Dr. Hickman brings over 26 years of microsurgical expertise to the practice, having performed thousands of successful procedures that have resulted in numerous births.

"The demand for vasectomy reversals have grown substantially as more men learn about the advanced microsurgical techniques that make reversal possible with high success rates," said Dr. Mark Hickman, founder and lead surgeon of the practice. "Our expansion allows us to better serve patients who travel from

across the country seeking specialized microsurgical expertise combined with transparent, affordable pricing."

The practice offers two comprehensive surgical packages designed to meet different patient preferences and needs. The first option, priced at $3,300, includes local anesthesia with oral sedation. The second option, at $4,200, features IV sedation administered by a board-certified anesthesiologist. Both packages include all surgical fees with no hidden costs, addressing a common concern among patients about unexpected medical expenses.

Dr. Hickman employs a pioneering microsurgical technique that involves precise repair of the vas deferens using a powerful operating microscope and fine nylon suture. This approach ensures careful alignment of the vas deferens ends and creates a watertight closure, significantly improving success rates compared to conventional surgical methods.

Patients seeking to become a vasectomy reversal surgeon candidate can access free consultations to discuss their specific situations and learn about the microsurgical procedure. The practice maintains extensive educational resources, including detailed FAQ sections, patient testimonials, and regular updates about advances in microsurgical techniques.

The practice has implemented comprehensive support systems for out-of-town patients, including assistance with scheduling and arrangements for discounted accommodations in the New Braunfels area. These services address the logistical challenges faced by patients traveling from distant states for the procedure.

The expansion reflects broader trends in reproductive medicine, where advances in microsurgical techniques have made vasectomy reversal an increasingly viable option for men who have undergone sterilization procedures. Studies indicate that approximately 6 to 10 percent of men who have had vasectomies later seek reversal procedures.

Microsurgical Vasectomy Reversals by Dr. Mark Hickman specializes in advanced microsurgical vasectomy reversal surgery procedures. Based in New Braunfels, Texas, the practice serves patients from across the United States with a focus on combining surgical excellence with transparent, all-inclusive pricing. Dr. Hickman has performed thousands of successful reversals over his 26-year career, helping couples achieve their family planning goals through specialized microsurgical techniques.
