Partnering for Health: ELIS Manufacturing and Packaging's Commitment to Quality in Supplement Manufacturing

October 02, 2025

KAUFMAN, TX - October 02, 2025 -

ELIS Manufacturing & Packaging Solutions, a contract manufacturer and packager for nutraceuticals, supplements, cosmetics, food and beverage and consumables, today emphasizes expanded production and packaging capacity at its Kaufman, Texas facility. The company positions its operations to support brand owners with turnkey services spanning custom flavors, formulation, encapsulation, pouch filling, jar filling, sachets and stickpacks, while underscoring regulatory compliance and scalable throughput across multiple production lines.

The Kaufman facility features segregated production lines and modern automation, including a fully automatic powder jar filling line capable of reaching 70 bottles per minute with integrated metal detection and an automatic check weighing system that communicates with filler heads to maintain consistent fill weights. Precision filling ranges from 0.5 ml dropper bottles to 4-liter containers, and encapsulation and custom blending capabilities support dietary supplements, sports nutrition powders and liquid formulations with traceable ingredient sourcing.

ELIS Manufacturing & Packaging Solutions offers full-scale contract manufacturing from formulation to final packaging, with custom formulation development, ingredient sourcing through established vendor networks and a range of bottle, pouch and stick pack packaging options to suit private label and branded lines. ELIS's nutraceutical contract manufacturing capabilities extend to powder packaging, dual-chamber containers and sample-size solutions, integrating printing, labeling, kitting and warehousing to align production runs with retail and direct-to-consumer fulfillment requirements.

"Our Kaufman operations combine family-rooted work ethic with industrial controls to deliver cGMP-compliant manufacturing, rapid turnaround, and integrated quality systems that protect product integrity across formulation, encapsulation and high-speed filling," said Keith Vinson, Chief Executive Officer of ELIS Manufacturing and Packaging Solutions Inc. "Clients rely on consistent fills, automated rejection systems, and supply chain transparency to take products to market with regulatory clarity and reliable logistics."

The company operates an FDA-registered, cGMP-certified facility with organic certification for eligible runs and a Texas Department of Health registration, supported by an in-house quality assurance team and stringent testing procedures throughout manufacturing. Automated rejection systems and integrated metal detection work alongside sampling and analytical checks to reduce nonconforming material, while documentation practices and label controls address regulatory requirements for nutraceutical and cosmetic product lines nationwide.

Value-added services include custom artwork and label printing, bottle screen printing, kitting and assembly to exact sequence and placement, plus warehousing, inventory management and distribution logistics that support multi-SKU orders and seasonal demand spikes. These services tie into a turnkey supply chain management approach that seeks to minimize vendor complexity for brands, offering economies of scale through consolidated sourcing, contracted material flows and coordinated shipping for national retail and e-commerce channels.

"Our approach is rooted in having been brand owners ourselves, so ELIS acts as an extension of a customer's team to reduce time and cost to market while maintaining strict process controls and responsive communication," said Keith Vinson, Chief Executive Officer of ELIS Manufacturing and Packaging Solutions Inc. "That mindset supports scalable runs from small pilot batches to high-volume production across multiple lines while preserving formulation fidelity and packaging consistency under rapid timelines."

Competitive differentiation includes a founder-led ethos inspired by family values, turnkey project management that handles design through delivery, and flexible scheduling enabled by multiple production lines that can run simultaneous SKUs. The company cites long-term client relationships and operational responsiveness as practical advantages for brands evaluating contract manufacturers, noting ability to manage small to high-volume production runs with precision applications for research, medical, private label

and consumer goods categories.

Sustainability and innovation manifest in recyclable packaging options such as paper stick packs, eco-friendly manufacturing practices and continuous development of packaging efficiencies to reduce material use and improve transport economics. Cutting-edge filling and weighing equipment enable tight tolerances for dosage accuracy in supplements and nutraceuticals, while the operations group coordinates certification needs, organic processing protocols and documented traceability for raw materials used in finished formulations.

ELIS serves brands across nutraceuticals, sports nutrition, beauty and cosmetics, food and beverage, pet supplies and organic product segments with national distribution support out of its American facility. The company provides contact details for prospective clients at its Kaufman, Texas address and maintains an info email for inquiries, offering scalable production capacity and logistical coordination to brands seeking turnkey contract manufacturing and packaging services to meet current market timelines.

Production availability is tied to the Kaufman plant?s operational specifics, including automatic filling capable of 70 bottles per minute, multiple segregated production lines for simultaneous SKUs, encapsulation and precision filling from 0.5 ml to 4-liter containers, integrated metal detection and automatic check weighing systems, and national distribution infrastructure to fulfill orders and support immediate product runs from the Dallas?Fort Worth facility.
