

Your Choice Plumbers Enhances Leak Detection Services with Advanced Acoustic Technology

October 06, 2025

ASPENDALE, VIC - October 06, 2025 - PRESSADVANTAGE -

Your Choice Plumbers has upgraded its leak detection capabilities with the acquisition of the Sewerin AQUAPHON A 200, bringing world-class acoustic precision technology to residential and commercial properties across Melbourne.

The Sewerin AQUAPHON A 200 represents a significant advancement in non-destructive leak detection technology. This sophisticated acoustic system enables technicians to identify the precise location of even the smallest leaks underground, including those beneath concrete or asphalt surfaces that conventional equipment might miss. The technology employs intelligent filtering and visual display capabilities that allow Melbourne leak detection experts to distinguish actual leak sounds from ambient noise such as traffic or air conditioning systems.

The investment in this advanced German-engineered equipment addresses a critical challenge facing property owners throughout the region: the high cost and property damage associated with traditional leak detection methods. Hidden water leaks, particularly those beneath concrete slabs or paved areas, have long posed significant risks, including structural damage, mold growth, and unexpectedly high water bills for

unsuspecting homeowners and businesses.

The implementation of this technology marks a shift from traditional exploratory methods that often resulted in unnecessary property damage. Previously, technicians might need to excavate multiple areas simply to locate a leak source, leading to extended repair times and increased restoration costs. The acoustic precision of the AQUAPHON A 200 enables what the industry refers to as confident excavation, where digging occurs only once, directly above the identified leak location.

"This investment represents our commitment to providing property owners with certainty and peace of mind," said a spokesperson for Your Choice Plumbers. "Rather than requiring multiple excavations to locate a leak, we can now pinpoint the exact location on the first attempt, minimizing property disruption and significantly reducing repair costs for our customers across our service areas."

Beyond the immediate benefits to individual property owners, the enhanced leak detection capability contributes to broader water conservation efforts throughout Melbourne. Early and accurate leak detection prevents thousands of liters of water waste, addressing both environmental concerns and the financial impact on households and businesses.

Your Choice Plumbers services the Inner City, Eastern, South Eastern, and Bayside suburbs of Melbourne, providing comprehensive plumbing solutions including gas leak detection and repair, bathroom renovations, blocked drain solutions, burst pipe repair, hot water system repairs, and specialized hospitality plumbing services. The company maintains membership with the Master Plumbers Association and holds full licensing through the Building and Plumbing Commission.

The addition of the AQUAPHON A 200 to their service capabilities reinforces the company's focus on non-invasive plumbing solutions. Property managers, homeowners, and business operators throughout Melbourne now have access to leak detection services that match international standards for accuracy and efficiency.

Your Choice Plumbers continues to invest in advanced technologies and training to ensure customers receive efficient, accurate, and minimally invasive plumbing solutions. The company has earned a reputation for professionalism and reliability, with positive customer feedback highlighting their commitment to quality service delivery.
