IV Solution & Ketamine Centers of Chicago Highlights Fibromyalgia Management Solutions Through Innovative Treatment Protocols

October 14, 2025

CHICAGO, IL - October 14, 2025 -

IV Solution and Ketamine Centers of Chicago continues to advance treatment options for patients suffering from fibromyalgia and other chronic pain conditions through its specialized intravenous ketamine therapy protocols. The medical facility, recognized as Chicago's first private center dedicated to ketamine infusion treatments, reports growing patient interest in alternative therapies for conditions that have not responded to conventional treatments.

The center's approach to fibromyalgia treatment represents a significant development in addressing a condition that affects millions of Americans and often proves resistant to traditional pain management strategies. Through customized 45-minute infusion sessions, the facility provides patients with carefully monitored treatments administered by board-certified anesthesiologists and registered nurses with specialized training in ketamine therapy.

"Fibromyalgia patients often come to us after exhausting multiple treatment options without finding adequate relief," said Dr. Bal Nandra, M.D., Medical Director at the center. "Our intravenous ketamine therapy protocols offer a different mechanism of action that can provide meaningful improvement for many patients who have struggled with chronic pain, fatigue, and other debilitating symptoms of fibromyalgia."

The treatment center has expanded its educational outreach through multiple platforms, including its website, social media presence, and patient testimonial videos. This approach allows prospective patients to learn about treatment experiences directly from individuals who have undergone the therapy. Read more about the company in this media story.

Beyond fibromyalgia, the facility specializes in treating treatment-resistant depression, anxiety, PTSD, bipolar disorder, chronic pain, and migraines. The center's protocol typically involves six ketamine infusions over a two-week period, followed by maintenance treatments tailored to individual patient needs. Research studies have demonstrated ketamine's effectiveness in treating various conditions through its action as an NMDA receptor blocker, offering rapid relief where other treatments have failed.

The facility also provides complementary therapies, including Stellate Ganglion Block injections for PTSD and NAD+ therapy for cognitive enhancement. Understanding that innovative treatments can present financial challenges, the center has established partnerships with healthcare financing organizations to improve treatment accessibility for patients.

"We recognize that many patients seeking our services have already invested significantly in their healthcare journey," added Dr. Nandra. "Our commitment extends beyond providing cutting-edge treatments to ensuring these therapies remain accessible to those who need them most."

IV Solution and Ketamine Centers of Chicago operates as a specialized medical clinic providing innovative intravenous treatments for mental health conditions and chronic pain. The facility combines state-of-the-art medical technology with personalized patient care, offering comprehensive health screenings and customized treatment plans. The center maintains a focus on evidence-based protocols while continuously evaluating emerging research to enhance patient outcomes.
