

Chapter 2 Incorporated Delivers Advanced Custom Machine Building and Retrofitting Solutions to Global Manufacturing Clients

October 08, 2025

LAKE MILLS, WI - October 08, 2025 - PRESSADVANTAGE -

Chapter 2 Incorporated, a leader in precision manufacturing and engineering services, is committed to delivering a variety of technology-based services including custom machine building and retrofitting to industries across the globe. With nearly five decades of experience, Chapter 2 consistently demonstrates its expertise in conceptualizing, designing and building machines customized to the unique demands of their clients' needs. This dedication makes Chapter 2 one of the most trusted names in advanced manufacturing solutions.

Chapter 2's custom machine building and retrofitting services has been an area of focus and growth for years. The company addresses a wide variety of challenges that manufacturers face in their own operational processes. Each machine is designed, built or retrofitted to meet the client's requirements, ensuring that operational efficiencies are optimized, downtime is minimized, and the overall productivity of the end-users is enhanced.

At the heart of Chapter 2's operations is an exceptional team of engineers and technicians who bring a wealth

of cross-industry experience to every project. This multidisciplinary expertise allows Chapter 2 to offer solutions that not only meet but often exceed client expectations. The company's approach is deeply collaborative, engaging closely with clients to understand their specific production hurdles and customize machinery that integrates seamlessly into existing workflows.

Common upgraded features for either application may include replacing or upgrading obsolete parts, from wiring to sensors, bearings, castings no longer available, servo motors and actuators, and air cylinder upgrades. The company frequently adds HMI (Human Machine Interface) for easier interaction and troubleshooting, along with efficiency counters and parts counters. Chapter 2 also specializes in upgrading controls and safety devices to work with modern safety equipment, implementing advancements in bearings and slide materials and technology, and adding in-process part marking, visual inspection, and labeling capabilities. Additional enhancements often involve automating load and unload processes on manual machines, updating sensor types to modern equivalents such as infrared, laser, capacitive or inductive sensors, and incorporating PID upgrades for flexibility in adjustment and monitoring.

"Every project is a unique challenge, and our team thrives at bringing effective resolutions to our clients' operational issues in a way that is tailored to their needs," said Kyle Johnston, CEO at Chapter 2 Inc. "Whether we are designing and building a new machine or bringing new life to legacy equipment, you know that our team will deliver a quality product on time and within budget with full transparency along the way."

Over the years, Chapter 2 has built a reputation not just for engineering excellence but also for its project management skills. Coordinating complex builds requires effective communication, resource planning, and timely execution, all of which the company handles adeptly. This ensures that clients experience a smooth transition from machine design to integration within their production lines, avoiding disruptions that might otherwise impede their output.

The company's dedication to precision and reliability extends beyond project completion. Chapter 2 provides education and ongoing technical support for all its projects, giving clients confidence that their investments will remain productive and up to date throughout the machinery's lifecycle. This long-term commitment reinforces the trust that clients place in Chapter 2 as a partner who supports their growth and operational stability.

Collaborating with Chapter 2 means accessing a network of master craftsmen and engineering experts dedicated to quality and innovation. The company's ability to blend traditional manufacturing skills with modern engineering technologies creates machines that deliver performance, durability, and adaptability. These attributes are essential in industries where production demands continuously evolve and downtime must be minimized.

"We view every machine we build as a partnership," Johnston added. "Our role is to apply our knowledge and creativity to help clients solve problems no one else can. The satisfaction of seeing a custom machine

integrate perfectly into a complex process is what drives our team to maintain the highest standards."

As manufacturing continues to advance with new materials, automation, and customization needs, Chapter 2 remains at the forefront by enhancing its offerings and refining its craftsmanship. The company's strategic focus on custom machine building by Chapter 2 will undoubtedly continue to support diverse industries in

overcoming their most intricate operational challenges.
