

Mindmachines.com Releases Third-Generation ROSHIwave Mind Machine: Meditation Made Simple

October 21, 2025

Dallas, Texas - October 21, 2025 -
Mindmachines.com has introduced the third generation of its ROSHIwave IN-SIGHT Mind Machine, a brainwave technology device that helps users achieve deep meditative states through a process the company describes as making meditation made simple. The updated device incorporates enhanced photostimulation protocols and expanded functionality for mental clarity and performance optimization.

The ROSHIwave employs a proprietary approach called Dynamic Neuro-Activation, which uses precisely calibrated light patterns delivered through specialized RGB LED glasses to influence brainwave frequencies. This technology differs from traditional entrainment methods by dis-entraining repetitive mental patterns rather than synchronizing the brain to specific frequencies, allowing users to reach meditative states similar to those achieved by experienced practitioners.

"The third-generation ROSHIwave represents a significant advancement in brainwave technology accessibility," said Fred Williams, Director of Product Development at Mindmachines.com. "By incorporating

the complete catalog of historical ROSHI protocols, including the pROSHI neurodynamic activator developed by the late Chuck Davis, we're providing users with comprehensive tools for mental optimization that previously required multiple devices."

The device features improved navigation systems and multiplexed protocol versions that expand its applications beyond meditation to include stress management, enhanced learning capabilities, and behavioral modification support. Nearly 100 clinicians worldwide currently utilize ROSHIwave technology in their practices for various wellness and performance applications.

The ROSHIwave system allows users to modify the color output of the glasses with simple button controls, enabling one pair of glasses to emulate the entire range of original pROSHI in-sight glasses. This consolidation of protocols includes pROSHI BB, pROSHI II, pROSHI II+ and pROSHI II+ 3D variations, all accessible through a single compact device.

The technology works through what the company calls an Error-Correction System for the Brain, which normalizes brainwave patterns to help users perk performance in various cognitive and wellness areas. The device guides users to achieve states of mental clarity typically associated with advanced meditation practitioners, often within 15-minute sessions.

The ROSHIwave has gained recognition among wellness professionals, performance coaches, and individuals seeking technological aids for meditation and mental optimization. While not classified as a medical device, it serves as a tool for those interested in exploring altered states of consciousness, accelerated learning, and improved sleep quality through brainwave modulation.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company also serves as the worldwide distributor of the ROSHIwave self-meditation device, continuing the legacy of brainwave entrainment research pioneered by Chuck Davis and other leaders in the field.
