

## **Television Star Margaret Josephs Shares Personal Experience with Medically Guided Wellness Through LifeRx.md**

*October 20, 2025*

October 20, 2025 - PRESSADVANTAGE -

Television personality, entrepreneur, and author Margaret Josephs is opening up about her personal wellness experience through LifeRx.md, a telehealth platform that provides licensed-provider oversight for metabolic health programs. Known for her candid, unfiltered approach, Josephs has long spoken openly about topics many people navigate privately, including aging, health, and self-confidence. Her decision to seek medically guided support reflects a growing trend among Americans looking for structured, evidence-informed options to address metabolic and hormonal changes that occur over time.

For the past three years, Josephs has participated in LifeRx.md's GLP-1 program, which includes treatment options prescribed and monitored by licensed medical providers. Her experience has focused on long-term, sustainable changes to support overall well-being rather than quick fixes or fad diets. Over this time, Josephs has experienced weight reduction, improved energy, and enhanced confidence in her daily life. She has chosen to share her story publicly to help reduce the stigma surrounding midlife health challenges and the use of medically guided treatment options.

"There's no shame, don't be embarrassed, everybody needs a little help," Josephs said. "I'm proud of the progress I've made with my medical team and I want other women to know that they deserve the same chance to feel strong, energized, and confident in their own skin."

GLP-1 medications belong to a class of treatments that are commonly used in metabolic care and have been the subject of medical research for specific conditions. These treatments may be prescribed as part of a broader, medically supervised wellness plan, depending on individual health needs. Josephs' results reflect her personal experience and are not necessarily typical for all patients. These programs should only be pursued under the guidance of a qualified healthcare provider.

"Margaret's transparency highlights how provider-led care can help individuals make informed decisions about their health," said Nic Sementas, Chief Advocacy Officer at LifeRx.md. "While each patient's journey is unique, her story helps bring attention to the importance of medically supervised wellness. We encourage everyone to consult directly with a healthcare professional to determine what's right for their personal health profile."

LifeRx.md provides patients with telehealth access to licensed clinicians who evaluate their health status, determine eligibility for medical programs, and provide ongoing monitoring throughout the treatment process. Unlike many traditional models, the company offers its services without requiring insurance coverage, long-term commitments, or hidden fees. Each patient undergoes an initial medical consultation before beginning treatment, ensuring that care plans are personalized and clinically appropriate. The telehealth format allows individuals to receive medical care from anywhere, making it more accessible to those who may not have regular in-person access to specialized providers.

Josephs has disclosed that her participation in the program includes a paid partnership with LifeRx.md. She has shared her experience across media platforms as part of an awareness effort to help normalize medically supervised wellness journeys. Her story is intended to shed light on her personal path and is not a substitute for professional medical advice. Individuals considering similar programs are encouraged to consult directly with licensed healthcare providers to determine whether GLP-1 or other metabolic treatment options are appropriate for their needs.

This shift toward transparent, medically guided wellness reflects broader changes in the healthcare landscape. Increasingly, patients are seeking accessible, evidence-informed options that bridge the gap between traditional care and the convenience of telehealth. Programs like those offered by LifeRx.md aim to provide an additional layer of support for individuals navigating complex metabolic or hormonal health concerns, particularly during midlife.

Disclaimer: Margaret Josephs' statements are based on her personal experience and should not be interpreted as medical advice or guarantees of results. GLP-1 treatments are prescription-only and must be evaluated and prescribed by a licensed healthcare provider. Individual outcomes may vary, and these programs are not suitable for everyone. Anyone considering this type of treatment should consult a qualified medical professional to determine if it is appropriate for their health situation.

#### About LifeRx.md

LifeRx.md is a telehealth and clinical platform focused on delivering medically supervised metabolic and cellular care. The company offers structured treatment programs, licensed clinician oversight, and ongoing medical monitoring, tailored to individual patient needs. Services are designed to be transparent and accessible, with no insurance mandates or binding contracts required.
