Post Electric Expands Residential Electrical Troubleshooting Services

October 16, 2025

Monett, MO - October 16, 2025 -
Post Electric, a licensed electrical contractor serving Southwest Missouri for over fifteen years, announces the expansion of its residential electrical services to address growing concerns about outdated wiring and insufficient electrical capacity in homes throughout the region. The expansion comes in response to a documented 40 percent increase in requests for electrical system evaluations over the past eighteen months.

Post Electric Residential Electrician services now include comprehensive electrical system evaluations, circuit capacity assessments, and customized upgrade solutions. The expansion addresses the growing trend of home-based businesses and remote work arrangements, which often require dedicated circuits for office equipment and enhanced electrical capacity in previously underutilized spaces.

The company has invested in advanced diagnostic equipment and expanded its team's expertise in residential electrical system upgrades, particularly focusing on homes built before 1990 that may not meet current electrical safety standards. Service calls have revealed widespread issues, including inadequate

outlet placement, outdated wiring materials, and circuits operating near or above safe capacity levels.

"The electrical demands of modern households have changed dramatically over the past two decades, but many homes in Southwest Missouri still rely on electrical systems designed for a different era," said Ryan, a spokesperson for Post Electric. "We're seeing more homeowners recognize the importance of updating their electrical infrastructure, especially as they add home offices, entertainment systems, and smart home technology that their original wiring wasn't designed to handle."

The company's diagnostic approach identifies potential safety hazards before they become emergencies. Common issues discovered during evaluations include aluminum wiring in older homes, insufficient grounding systems, and overloaded electrical panels. Post Electric Electrical Wiring upgrades focus on bringing these systems up to current safety standards while accommodating both present needs and future electrical requirements.

The expanded services cover Pierce City, Verona, Aurora, Cassville, Springfield, Mount Vernon, Ozark, and Monett. Each project begins with a thorough assessment of the existing electrical system, followed by recommendations tailored to the specific needs and budget of the homeowner.

"Our goal is to help homeowners understand their electrical systems and make informed decisions about necessary upgrades," added Ryan. "Many people don't realize their electrical system needs attention until they experience problems like flickering lights, warm outlet covers, or frequently tripped breakers. These are all signs that an evaluation is overdue."

Post Electric maintains full licensing and insurance coverage, providing peace of mind to homeowners undertaking electrical upgrades. The company offers a one-year workmanship warranty on all installations and provides 24-hour emergency services throughout Southwest Missouri.

As a family-owned and operated business, Post Electric has built its reputation on quality workmanship and reliable service. The company provides residential, commercial, and industrial electrical services, utilizing high-quality materials and the latest techniques to ensure safe and efficient electrical installations. The expansion of residential services represents the company's commitment to meeting the evolving electrical needs of Southwest Missouri communities.
