

Ready AutoGlass & Windshield Repair Expands ADAS Calibration Services for Modern Vehicle Safety Systems

October 20, 2025

Chehalis, Washington - October 20, 2025 - PRESSADVANTAGE -

Ready AutoGlass & Windshield Repair has expanded its Advanced Driver Assistance Systems (ADAS) calibration services to address the growing complexity of modern vehicle windshield replacements. The Vancouver, Washington-based auto glass specialist now offers comprehensive calibration procedures for the sophisticated safety sensors and cameras that are increasingly integrated into contemporary vehicle windshields.

Modern vehicles rely heavily on windshield-mounted technology for critical safety features including lane departure warnings, automatic emergency braking, and adaptive cruise control. These systems require precise calibration after any windshield replacement to maintain proper functionality and ensure driver safety. The expansion of ADAS calibration services reflects the company's response to the evolving technological demands of the automotive industry.

"Today's windshields are far more than simple glass barriers between drivers and the elements," said Eric, a Spokesperson from Ready AutoGlass & Windshield Repair. "They serve as mounting platforms for sophisticated safety sensors that must be calibrated with extreme precision. Even a minor misalignment

during installation can compromise the entire safety system, potentially putting drivers and passengers at risk."

The company's certified technicians undergo specialized training to handle the calibration requirements of various vehicle manufacturers. Each ADAS system has specific calibration protocols that must be followed exactly to restore the vehicle's safety features to factory specifications. This technical expertise has become essential as automotive manufacturers continue to integrate more advanced safety technology into their vehicles.

Ready AutoGlass & Windshield Repair provides both in-shop and mobile auto glass service throughout the Vancouver area, allowing customers to have their windshields replaced and ADAS systems calibrated at their preferred location. The company uses OE-quality glass and advanced urethane systems to ensure proper installation across all vehicle makes and models.

The expansion of ADAS calibration capabilities comes as many new vehicles now feature some form of advanced driver assistance technology. This technology continues to grow as automotive manufacturers make these safety features standard equipment rather than optional upgrades.

Beyond ADAS calibration, the company maintains its comprehensive range of auto glass services including side and rear glass repair, sunroof glass replacement, mirror replacement, and specialized motor home windshield services. The company also handles insurance coordination, working directly with insurance providers to streamline the repair process for customers.

Ready AutoGlass & Windshield Repair has served the Southwest Washington region for over 36 years, establishing itself as a trusted provider of auto glass repair and replacement services. The company's commitment to staying current with automotive technology ensures that customers receive proper installation and calibration services that maintain their vehicles' safety systems at optimal performance levels.
