Lazaderm Highlights Advanced Laser Tattoo Removal Services Amid Demand for Ink Removal

October 30, 2025

FARGO, ND - October 30, 2025 - PRESSADVANTAGE -

Lazaderm, a medical spa with locations across North Dakota, South Dakota, Iowa, and Arizona, is highlighting its advanced laser tattoo removal services as demand for professional ink removal continues to rise across the Midwest and Southwest regions. The clinic utilizes both Q-switched Nd:YAG and Picosecond laser technologies to provide effective tattoo removal treatments for clients seeking to remove or fade unwanted tattoos.

The medical spa's tattoo removal services come at a time when industry data shows increasing numbers of individuals seeking professional tattoo removal for various reasons, including career changes, lifestyle adjustments, and preparation for cover-up tattoos. Lazaderm offers comprehensive consultations to evaluate each tattoo's unique characteristics, including ink colors, depth, and age, to develop customized treatment plans.

"Tattoo removal technology has advanced significantly in recent years, and we're seeing more clients who

want safe, effective options for removing or fading their tattoos," said Lornell E. Hansen II, MD, Owner and Medical Director at Lazaderm. "Our dual-technology approach using both Q-switched and Picosecond lasers allows us to treat a wider range of tattoo types and skin tones than ever before, delivering results that were simply not possible with older removal methods."

The clinic's laser tattoo removal process works by delivering precise pulses of light energy that break down tattoo ink particles into smaller fragments, which the body's immune system then naturally eliminates over time. Multiple sessions are typically required, with treatments spaced several weeks apart to allow for proper healing and ink clearance between appointments.

Beyond tattoo removal, the medical spa offers a comprehensive range of aesthetic treatments, including CoolSculpting Elite, various neurotoxin injections such as Botox and Dysport, dermal fillers, laser hair removal, BBL photofacials, MOXI fractional laser treatments, microneedling, and surgical liposuction. The clinic serves clients from Fargo, West Fargo, Moorhead, Grand Forks, Fergus Falls, Detroit Lakes, and surrounding areas.

The growing interest in professional tattoo removal services has been reflected in client feedback, with a recent five-star review of Lazaderm praising the clinic's expertise and results in aesthetic treatments. The medical spa maintains locations in Chandler, Arizona; Sioux City, Iowa; Fargo, North Dakota; Sioux Falls, South Dakota; and Watertown, South Dakota.

Lazaderm operates as a luxury aesthetic clinic focused on non-surgical treatments designed to enhance beauty and improve skin health. The clinic's team of aesthetic professionals, including nurses and licensed medical aestheticians, combines industry expertise with advanced technology to deliver personalized treatment plans. The medical spa offers free consultations for prospective clients to discuss their aesthetic goals and explore available treatment options. As an affiliate of Physicians Vein Clinics, the organization maintains a commitment to medical-grade aesthetic services delivered in a professional clinical environment.
