Mindmachines.com Advances Mind Technology with RoshiWave Device for Meditation and Peak Performance

October 31, 2025

Dallas, Texas - October 31, 2025 -
Mindmachines.com has announced the availability of the RoshiWave IN-SIGHT Mind Machine, a device that employs disentrainment technology to guide users into deep meditative states typically achieved only by experienced practitioners. The pocket-sized device represents the latest advancement in consumer-accessible brainwave normalization technology.

The RoshiWave utilizes a process called Dynamic Neuro-Activation, which sends calibrated light patterns through specialized glasses to normalize brainwave frequencies. Unlike traditional entrainment methods that synchronize brainwaves to external stimuli, this disentrainment approach works to free the mind from unhealthy cyclical patterns, allowing users to achieve meditative states comparable to those of Zen masters in as little as 15 minutes.

"The RoshiWave represents a significant advancement in making deep meditation accessible to everyone,

regardless of their experience level," said Fred Williams, Director of Technology Development at Mindmachines.com. "What traditionally takes years of dedicated practice can now be experienced through targeted brainwave normalization, helping users achieve mental clarity and peak performance states that were previously difficult to attain."

The device operates through photostimulation, delivering specific light frequencies through RGB-enabled glasses that work with both open and closed eyes. This mind technology includes multiple operating protocols designed for various objectives, from achieving restful sleep to optimizing cognitive performance. The system includes classic ROSHI-style protocols that have been used by nearly 100 clinicians worldwide, along with newly developed multiplexed versions.

The third and final revision of the RoshiWave includes enhanced navigation features and additional operating modes. Each unit comes equipped with a console, color-changing RGB RoshiGlasses, a Ganzfeld RoshiVisor, USB charging capabilities, and a carrying case. The device functions similarly to a click-wheel mp3 player, making it intuitive for users familiar with portable electronic devices.

Clinicians and wellness practitioners have integrated the technology into their practices as a tool for helping clients manage stress, improve focus, and achieve deeper states of relaxation. The device serves as what the company describes as a "GPS for the Brain," guiding users to meditative states beyond the perception of time without requiring conscious effort or years of meditation training.

The technology addresses growing interest in accessible mental wellness tools as individuals seek alternatives to traditional meditation practices. While the device is not classified as medical equipment, it represents an advancement in consumer technology designed to support mental wellness and cognitive optimization goals.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, and meditation machines. The company serves as the worldwide distributor of the RoshiWave self-meditation device. Based in Dallas, Texas, and operated by Av3X LLC, Mindmachines.com has established itself as a resource for brainwave technology and mental wellness tools, providing products to consumers and practitioners globally.
