Clear The Air Cooling & Heating Highlights Rising Demand for Heat Pumps

November 04, 2025

November 04, 2025 -
As Texas homeowners search for smarter, more efficient ways to manage indoor comfort, Clear The Air Cooling & Heating is seeing a sharp rise in interest for modern heat pump systems. The company, which serves Pearland, Friendswood, Clear Lake City, Alvin, and the Greater Houston area, reports that homeowners are turning to heat pumps for their ability to deliver both heating and cooling in one system, while cutting energy use and monthly utility costs.

Heat pumps have long been popular in mild climates, but improvements in inverter technology and cold-weather performance have made them viable for nearly every Texas home. Unlike traditional HVAC systems that rely on separate furnaces and air conditioners, a heat pump transfers heat rather than generating it, making it significantly more efficient.

?More homeowners across the Houston region are realizing that heat pumps can keep them comfortable in both summer and winter while lowering energy bills,? said Jason Stom, company representative for Clear The Air Cooling & Heating. ?We?ve installed more high-efficiency heat pumps in the last year than ever before, and the demand keeps growing as people learn how well they perform in our climate.?

According to the U.S. Department of Energy, heat pumps can reduce electricity use for heating by roughly 50 percent compared to electric resistance systems. The technology has become a top choice in Pearland and surrounding communities, where energy efficiency and sustainability are increasingly important to homeowners.

Clear The Air?s technicians have seen particular growth in households replacing aging air-conditioning units with dual-mode heat pumps that handle year-round temperature control. The company notes that many homeowners are also pairing heat pumps with smart thermostats, ductless mini-splits, and improved insulation to further enhance comfort and efficiency.

Stom noted that local climate patterns make the Greater Houston region ideal for heat pump adoption. ?Our winters are mild, but not nonexistent,? he said. ?Homeowners need systems that can handle temperature swings efficiently, and today?s heat pumps do exactly that. They provide steady comfort without relying on fossil fuels or high-draw heating elements.?

To support growing demand, Clear The Air offers a range of heat pump options tailored to home size, layout, and existing infrastructure. Each installation begins with a detailed home assessment that examines insulation quality, ductwork efficiency, and energy-use history to determine the most cost-effective solution.

The company?s service team also helps homeowners take advantage of available rebates and incentives for high-efficiency heat pump systems. Several Texas utilities are promoting adoption through rebate programs that offset installation costs, further encouraging residents to make the switch.

?Energy efficiency is no longer just a buzzword?it?s a smart investment,? Stom added. ?With the right system, homeowners can reduce their carbon footprint and see a tangible return through lower energy bills and fewer repair needs.?

Beyond performance and savings, Stom emphasized that heat pumps contribute to healthier indoor environments. Because they maintain more consistent humidity levels and circulate cleaner air, they can help reduce dust, allergens, and indoor pollutants?an important benefit for families managing allergies or respiratory sensitivities common in humid Gulf Coast climates.

Clear The Air recommends that homeowners considering an upgrade schedule a professional evaluation before the next major temperature shift. The company?s technicians are trained to identify opportunities for improved efficiency and guide customers through selecting, installing, and maintaining new systems.

As more households in Pearland and the Greater Houston area focus on sustainability, Clear The Air expects

heat pump installations to continue rising through 2026 and beyond.

?Technology has caught up with homeowner expectations,? Stom concluded. ?Today?s heat pumps are reliable, quiet, and remarkably efficient. We?re proud to help Texas families transition to a better way of staying comfortable year-round.?

Since 1990, Clear The Air Cooling & Heating has provided trusted HVAC installation, repair, and indoor air quality services to residential and commercial customers throughout Greater Houston. The company is known for its transparent pricing, professional service, and commitment to long-term customer satisfaction.
