IV Solution & Ketamine Centers of Chicago Expands Treatment Protocols for Chronic Pain and Mental Health Conditions

October 27, 2025

CHICAGO, IL - October 27, 2025 -
IV Solution & Ketamine Centers of Chicago, the city's first private facility dedicated to intravenous ketamine therapy, has expanded its comprehensive treatment protocols to better serve patients suffering from treatment-resistant mental health conditions and chronic pain disorders.

The medical clinic now offers enhanced ketamine infusion therapy alongside complementary treatments, including Stellate Ganglion Block injections and NAD+ therapy. These expanded protocols address conditions that have proven resistant to conventional therapies, including treatment-resistant depression, anxiety, PTSD, OCD, fibromyalgia, and chronic pain.

"The expansion of our treatment protocols reflects our commitment to providing comprehensive care for patients who have exhausted traditional treatment options," said Bal Nandra, M.D., Medical Director at IV Solution and Ketamine Centers of Chicago. "We're seeing remarkable results in patients with fibromyalgia

management solutions through our customized ketamine infusion protocols, particularly when combined with our other therapeutic modalities."

The center's ketamine therapy involves customized 45-minute infusion sessions administered by board-certified anesthesiologists and registered nurses with specialized training. Patients remain conscious throughout the procedure while the ketamine works as an NMDA receptor antagonist, creating new neural pathways that can provide symptom relief within hours or days of treatment.

Recent developments in ketamine therapy have garnered significant attention in the medical community, with increasing recognition of its efficacy for treatment-resistant conditions. The expansion comes as demand for alternative therapies continues to grow among patients seeking relief from chronic conditions that have not responded to conventional treatments.

The facility has also introduced financial assistance programs through partnerships with healthcare financing organizations to ensure treatment accessibility for all patients. This initiative addresses the growing need for affordable mental health and pain management options in the Chicago area.

As featured in a recent media story, the clinic's success rates have positioned it as a leading provider of innovative treatment solutions in the Midwest. The facility continues to adapt its offerings based on patient feedback and the latest medical research, maintaining its position at the forefront of ketamine therapy advancement.

Patients seeking treatment undergo comprehensive health screenings to assess their suitability for the various therapies offered. The clinic provides extensive patient resources, including detailed information about treatment expectations, frequently asked questions, and patient testimonials documenting successful outcomes.

The center's integrated approach combines multiple treatment modalities to address both the physical and psychological aspects of chronic conditions. This comprehensive strategy has proven particularly effective for patients with complex presentations involving both mental health and chronic pain components.

IV Solution and Ketamine Centers of Chicago specializes in providing innovative intravenous treatments for various mental health conditions and chronic pain. As Chicago's first private facility dedicated to clinically proven intravenous ketamine therapies, the center offers treatments for depression, anxiety, PTSD, bipolar disorder, chronic pain, migraines, and fibromyalgia. The state-of-the-art medical facility employs board-certified anesthesiologists, registered nurses, and skilled staff committed to providing personalized

care for each patient.
