

Go Industries Inc Expands Grille Guard System with Enhanced Winch Mount Integration

October 28, 2025

Richardson, TX - October 28, 2025 -
Go Industries Inc, a Texas-based manufacturer of heavy-duty truck protection equipment, has expanded its commercial-grade winch grille guard offerings to meet demand from fleet operators and commercial trucking companies across North America. The expansion features modular grille guard systems with integrated winch mount capabilities designed for heavy-duty commercial applications.

The expanded product line addresses the growing need for versatile protection solutions that combine front-end defense with winch functionality. The modular grille guard with winch mount system allows commercial operators to customize their truck protection based on specific operational requirements. Constructed from 5/16 inch laser-cut steel uprights with 2.5-inch 16-gauge steel cross tubes, the system provides substantial protection for commercial vehicles operating in demanding environments.

"The expansion of our winch grille guard line reflects the evolving needs of commercial truck operators who require both protection and recovery capabilities in a single integrated system," said a Go Industries

spokesperson. "Our modular design approach allows fleet managers to configure their vehicles with the exact level of protection and functionality their operations demand."

The enhanced product offerings include optional brush guards that complement vehicle lines while providing additional protection to the headlight area from road debris and off-road brush. The system accommodates both 9.5 and 16.5 winch carriers, giving operators flexibility in selecting recovery equipment appropriate for their vehicle weight and operational requirements.

The expansion complements Go Industries' existing portfolio of truck protection equipment, which includes headache racks, bumper replacements, air flow tailgates, and mudguards. This comprehensive approach to vehicle protection allows commercial operators to source multiple protection solutions from a single manufacturer, streamlining procurement and ensuring compatibility across product lines.

Go Industries has engineered the expanded line with installation efficiency in mind. Each system includes custom heavy-duty mounting brackets designed for maximum strength and simplified installation. The modular design enables fleet maintenance teams to add or modify components as operational needs change, reducing vehicle downtime and maintenance costs.

All products in the expanded winch grille guard line carry a three-year warranty covering materials, workmanship, and finish. Technical support remains available to assist commercial customers with installation requirements and maintenance procedures. The entire product line continues to be manufactured in the United States at Go Industries' Texas facilities.

Go Industries Inc has served the commercial trucking and law enforcement sectors since 1978, specializing in heavy-duty truck protection equipment and custom manufacturing solutions. The company maintains Platinum Status with SEMA and operates from its manufacturing facility in Richardson, Texas. Go Industries' product portfolio encompasses front and back-end protection systems and accessories, law enforcement vehicle equipment, and custom manufacturing services for specialized commercial applications.
