

Encore Data Products Showcases New Lunar Magnetic Locking Pouches at NMTIE Conference

November 05, 2025

LAFAYETTE, CO - November 05, 2025 -
Encore Data Products will showcase its newest addition to their product catalog, the Lunar magnetic locking pouches at the New Mexico Technology in Education (NMTIE) conference, demonstrating the latest classroom device management solutions for educational institutions across the state.

The Lafayette, Colorado-based provider of educational technology products will exhibit at booth 20 during the annual NMTIE trade show, where educators and administrators gather to explore technology solutions for modern classrooms. The company's new lockable cell phone pouches represent its latest offering in device management systems designed specifically for educational environments.

?The NMTIE conference provides an ideal platform to introduce the Lunar magnetic locking pouches to New Mexico educators who are seeking practical solutions for classroom device management,? said a spokesperson for Encore Data Products. ?These pouches address the growing need for secure device storage while maintaining quick accessibility when appropriate.?

The Lunar magnetic locking pouches feature gray exteriors with black interiors and utilize magnetic locking mechanisms that secure student devices during instructional time. The pouches are constructed with materials designed to withstand repeated daily use in classroom settings, from elementary schools through university lecture halls.

NMTIE serves as New Mexico's primary technology education conference, bringing together educators, technology coordinators, and industry partners to explore innovations in educational technology. The event attracts hundreds of participants annually who seek solutions to enhance learning environments and address classroom management challenges.

Encore Data Products' participation in the conference comes as schools nationwide implement structured device management protocols. Educational research indicates that organized approaches to phone storage during class can improve student attention spans by measurable percentages, prompting administrators to explore systematic solutions.

The magnetic locking system allows authorized personnel to secure and release devices as needed, accommodating various school policies regarding emergency access and scheduled device use. Schools can integrate the pouches into existing classroom procedures without requiring infrastructure modifications or extensive staff training.

?Conference attendees will have the opportunity to examine the locking mechanism and construction quality firsthand at our booth,? added the representative. ?We look forward to discussing how these pouches can support different device management approaches that schools are implementing.?

The introduction of the Lunar magnetic locking pouches expands Encore Data Products' portfolio of classroom technology solutions. The company's presence at NMTIE reflects its ongoing engagement with the educational technology community and its response to evolving classroom management needs.

Educational technology departments increasingly prioritize device management solutions as part of comprehensive digital citizenship programs. The availability of purpose-built storage systems enables schools to establish consistent policies while protecting student property.

Encore Data Products has served the educational sector for years, providing audio equipment, AV technology, charging solutions, and accessories designed for classroom use. The company specializes in products that address practical challenges faced by educators while supporting focused learning environments. Their comprehensive catalog includes headphones, microphones, PA systems, and various technology management solutions tailored to educational institutions.
