Simpson Plumbing Launches Advanced Home Water Filtration Solutions

November 10, 2025

CAMAS, WA - November 10, 2025 -
Simpson Plumbing LLC, a trusted family-owned plumbing company led by owner Bethanie Anderson, has announced the expansion of its professional water filtration services to Vancouver, WA. This expansion reinforces the company?s mission to help local homeowners access cleaner, safer water and maintain efficient plumbing systems year-round. The new service offering, launched this fall, comes as many residents are prioritizing water quality improvements and long-term home efficiency before the winter season.

The decision to expand water filtration services reflects the growing need among homeowners for reliable solutions that protect both household health and plumbing infrastructure. Across the U.S., concerns over hard water, sediment, and chemical contaminants have led to greater interest in in-home filtration systems. According to the U.S. Geological Survey, about 85% of American homes experience hard water, which can cause mineral buildup, dull laundry, and reduced appliance efficiency. The U.S. Environmental Protection Agency (EPA) has also noted that older municipal systems may introduce trace levels of contaminants into tap water, underscoring the importance of point-of-entry filtration systems for homes.

Fall is considered an ideal season to install or upgrade a home water filtration system. As cooler weather approaches, homeowners typically use more hot water for bathing, cooking, and cleaning, placing extra demand on plumbing systems. Installing filtration before winter ensures consistent water quality, reduces mineral buildup, and extends the life of water heaters and fixtures. Clean water also improves daily comfort by enhancing taste, odor, and overall water clarity throughout the home.

?Expanding our water filtration services to Vancouver allows us to help more homeowners achieve safer, cleaner water while protecting their plumbing systems from long-term damage,? said Bethanie Anderson, owner of Simpson Plumbing LLC. ?As the weather cools and water use increases, this is the perfect time to install or upgrade a filtration system that improves home efficiency and water quality.?

In addition to providing cleaner, better-tasting water, filtration systems contribute to energy savings and sustainability. Hard water can cause scale buildup inside pipes, faucets, and water heaters, reducing efficiency and increasing energy costs. The U.S. Department of Energy reports that heating hard water can raise energy consumption by up to 29%, as mineral deposits insulate heating elements and lower performance. By filtering water at the point it enters the home, residents can reduce these hidden costs and enjoy consistent water pressure and temperature year-round.

Installing a water filtration system is a straightforward process that typically takes just a few hours, depending on home size and system type. Homeowners can choose from various options, including whole-home systems that treat water throughout the property or point-of-use filters for specific taps. Each system can be customized to address issues like hard water, chlorine taste, or sediment buildup. In most cases, regular maintenance is minimal, making it an easy and long-lasting improvement that benefits both comfort and plumbing health.

Water filtration is also an environmentally friendly upgrade. By improving tap water quality, homeowners can reduce or eliminate their reliance on bottled water, cutting down on plastic waste and storage costs. Modern filtration systems are designed for efficiency and durability, offering years of clean water with minimal environmental impact.

Simpson Plumbing LLC, in Vancouver, WA, provides a full range of residential plumbing services, including repairs, installations, and water treatment solutions. With the addition of professional water filtration in Vancouver, the company continues its commitment to delivering reliable, environmentally conscious plumbing support to local homeowners.

As the fall season continues, Simpson Plumbing LLC encourages residents in Vancouver to schedule water quality evaluations and explore filtration options before winter. The company?s expansion offers homeowners a timely opportunity to improve their water quality, extend the life of their plumbing systems, and enjoy cleaner, better-tasting water every day.
