# Post Electric Expands Residential Services to Address Circuit Breaker and Electrical System Challenges

*November 03, 2025*

Monett, MO - November 03, 2025 -
Post Electric, a licensed electrical contractor serving Southwest Missouri, has expanded its residential electrical services to address the increasing demand for electrical system evaluations and upgrades throughout the region. The expansion comes in response to a 40 percent increase in service requests over the past 18 months, driven by changing household electrical needs and aging infrastructure in homes built before 1990.

The expanded service offerings include comprehensive electrical system evaluations, circuit capacity assessments, and customized upgrade solutions designed to meet modern electrical demands. The company has invested in advanced diagnostic equipment and expanded its technical expertise to better serve homeowners facing electrical capacity challenges.

As a Post Electric Residential Electrician team member explained, many older homes in the service area were built with electrical systems that cannot adequately support today's technology-driven lifestyles. The

proliferation of home offices, electric vehicle charging stations, smart home devices, and high-powered appliances has placed unprecedented demands on residential electrical infrastructure.

"The electrical demands of modern households have changed dramatically over the past two decades, yet many homes in Southwest Missouri still rely on electrical systems designed for a different era," said Ryan, spokesperson for Post Electric. "Our diagnostic approach identifies potential safety hazards before they become emergencies, giving homeowners peace of mind and helping them avoid costly repairs down the road."

The company's expanded services begin with a thorough assessment of existing electrical systems, followed by detailed recommendations tailored to each homeowner's specific needs and budget. The evaluation process examines everything from main service panels to individual circuit loads, ensuring that all components meet current electrical safety standards.

Post Electric Electrical Wiring expertise has become increasingly important as homeowners discover outdated wiring methods and materials in their properties. The company's technicians are trained to identify aluminum wiring, knob-and-tube systems, and other outdated configurations that may pose safety risks or limit electrical capacity.

The expansion addresses a critical need in Southwest Missouri communities, including Pierce City, Verona, Aurora, Cassville, Springfield, Mount Vernon, Ozark, and Monett. Each of these areas contains a significant number of homes constructed before modern electrical codes were established, creating widespread demand for professional evaluation and upgrade services.

"Remote work arrangements and home-based businesses have fundamentally changed how people use their homes," added Ryan. "What worked for a household in 1985 simply cannot meet the electrical demands of 2024. We are seeing everything from overloaded circuits to inadequate grounding systems that need immediate attention."

The company maintains full licensing and insurance coverage for all residential electrical work and provides a one-year workmanship warranty on installations. Emergency services remain available around the clock for urgent electrical issues.

Post Electric is a family-owned and operated electrical contractor with over 15 years of experience serving Southwest Missouri. The company provides residential, commercial, and industrial electrical services throughout the region, combining traditional craftsmanship with modern diagnostic technology to ensure safe

and efficient electrical installations.
