

ABC Damage Restoration Expands Environmental Contracting Services

October 29, 2025

SPRINGFIELD, MO - October 29, 2025 -
ABC Damage Restoration has announced an expansion of its comprehensive restoration services throughout Missouri, strengthening its capacity to serve residential and commercial clients facing property damage emergencies. The locally owned company, operating as ABC Environmental Contracting Services, has enhanced its service capabilities across Springfield, St. Louis, Columbia, and Kansas City to meet growing demand for professional restoration solutions.

"This expansion represents our commitment to being there when Missouri property owners need us most," said Johnathon Benton, a representative from ABC Damage Restoration. "By strengthening our presence across multiple cities, we can respond more quickly to emergencies and provide the comprehensive restoration services that both homeowners and businesses require during challenging times."

The company's enhanced service area coverage comes as severe weather events and aging infrastructure continue to impact properties throughout Missouri. Recent industry data indicates that water-related damage

claims have increased significantly in the region, making rapid professional response critical for minimizing property damage and preventing secondary issues such as mold growth.

The expansion enables the company to provide faster response times and broader coverage for its full range of restoration services, including water damage restoration, fire damage restoration, mold remediation, and asbestos removal. With certified technicians available around the clock, the company has positioned itself to address the increasing need for emergency restoration services across Missouri's major metropolitan areas.

ABC Environmental Contracting Services maintains IICRC certification and employs advanced restoration techniques and equipment to address various types of property damage. The company's services encompass initial assessment, water extraction and mitigation, cleanup and remediation, and complete reconstruction services. Additionally, the firm assists clients with restoration insurance claims, helping property owners navigate the complex documentation and approval processes.

The expansion particularly enhances the company's capacity for handling complex commercial projects, including restoration work for schools, government buildings, and property management companies. The company's technicians receive ongoing training in the latest restoration methodologies and safety protocols, ensuring compliance with industry standards and regulations.

Beyond emergency response, the company provides specialized services including asbestos testing and removal, content cleaning for damaged personal belongings, and sewage cleanup. These services require specific expertise and equipment, which the company has invested in to serve the diverse needs of Missouri property owners.

The company categorizes water damage into three distinct categories based on contamination levels: clean water from broken pipes or rain, grey water from appliances, and black water from sewage or flooding. This classification system enables the restoration team to apply appropriate safety measures and restoration techniques for each situation.

ABC Damage Restoration operates as a licensed, bonded, and insured restoration contractor, maintaining BBB Accreditation with an A- rating. The company's 24/7 emergency response capability ensures that property owners can access professional restoration services whenever disaster strikes, minimizing damage and accelerating the recovery process for affected properties throughout Missouri.
