Cool Blew Inc. Expands Emergency HVAC and Solar Services

November 19, 2025

Peoria, AZ - November 19, 2025 -
Cool Blew Inc., a Peoria-based HVAC and solar services provider, announces expanded round-the-clock emergency response capabilities for both heating and cooling systems and solar installations throughout the greater Phoenix metropolitan area. The expansion addresses growing demand for immediate technical support as extreme weather events and power grid challenges increase across Arizona.

The company, which has served Arizona communities since 2002, reports an increase in emergency HVAC in Peoria service calls over the past year, particularly during peak summer months when temperatures regularly exceed 110 degrees Fahrenheit. The expanded emergency services now cover residential and commercial properties across Peoria, Surprise, Phoenix, Glendale, Sun City, Sun City West, Scottsdale, Mesa, Gilbert, Tempe, and Chandler.

"Arizona homeowners and businesses face unique challenges with both traditional HVAC systems and solar installations due to our extreme climate conditions," said Scott Proctor, Operations Manager at Cool Blew Inc. "When air conditioning fails during a heat wave or solar panels malfunction during peak production hours, immediate response becomes critical for safety and comfort. Our expanded emergency services ensure that

residents have access to qualified technicians when they need them most."

The company's emergency response team handles various critical situations, from complete system failures to partial malfunctions affecting energy efficiency. Besides HVAC services, technicians address refrigerant leaks, compressor failures, electrical issues, and thermostat malfunctions. The solar division provides emergency solar repair services for inverter failures, panel damage from storms, wiring issues, and monitoring system problems.

Cool Blew Inc. maintains a fleet of fully equipped service vehicles and stocks commonly needed replacement parts to minimize repair time during emergency calls. Technicians receive ongoing training on the latest HVAC technologies and solar systems from leading manufacturers, ensuring they can service all major brands and models.

The expansion comes as Arizona experiences continued population growth and increased adoption of solar energy systems. According to industry data, the state ranks among the top five nationally for installed solar capacity. The state also ranks high in annual HVAC service demands. This dual expertise positions Cool Blew Inc. to address the interconnected needs of modern home energy systems.

"We recognize that many homeowners now rely on integrated systems where HVAC and solar components work together for optimal energy efficiency," added Proctor. "Our technicians understand these connections and can diagnose issues that might affect both systems simultaneously, providing comprehensive solutions rather than temporary fixes."

Cool Blew Inc. is a family-owned and operated company providing air conditioning, heating, plumbing, and solar services throughout the Phoenix metropolitan area. As a factory-authorized dealer for major HVAC brands, the company offers installation, repair, and maintenance services for residential and commercial properties. The company also specializes in energy-saving solutions, including insulation, duct sealing, and solar panel installation, helping Arizona residents reduce utility costs while maintaining indoor comfort.
