# IV Solution & Ketamine Centers of Chicago Expands Treatment Protocols for Healing PTSD and Chronic Pain Conditions

*October 31, 2025*

CHICAGO, IL - October 31, 2025 -

IV Solution & Ketamine Centers of Chicago has announced expanded treatment protocols designed to address the growing need for alternative therapies in managing treatment-resistant mental health conditions and chronic pain disorders. The medical clinic, recognized as Chicago's first private facility dedicated to intravenous ketamine therapy, has enhanced its comprehensive approach to treating conditions including PTSD, anxiety, depression, and chronic pain syndromes.

"We are witnessing a significant shift in how medical professionals approach treatment-resistant conditions, particularly PTSD and chronic pain disorders," said Bal Nandra, M.D., Medical Director at IV Solution and Ketamine Centers of Chicago. "Our expanded protocols reflect the latest clinical research and our commitment to providing patients with access to innovative therapies that can offer real relief when traditional treatments have fallen short."

The expanded protocols incorporate advanced ketamine infusion techniques alongside complementary therapies such as Stellate Ganglion Block injections and NAD+ therapy. These evidence-based treatments provide new options for patients who have not found relief through conventional medical approaches.

The clinic's ketamine infusion therapy has demonstrated effectiveness in treating various conditions, including treatment-resistant depression, anxiety disorders, PTSD, OCD, and chronic pain syndromes. The treatment involves the controlled administration of ketamine directly into the bloodstream under careful medical supervision by anesthesiologists and registered nurses.

For patients seeking fibromyalgia management solutions, the clinic has developed specialized infusion protocols that address both the pain and psychological components often associated with this complex condition. Many patients have reported significant improvements in their symptoms after undergoing customized treatment plans.

The addition of Stellate Ganglion Block therapy represents a significant advancement in PTSD treatment options. This procedure involves a targeted injection that blocks nerve signals contributing to PTSD symptoms, offering potential relief for veterans and others struggling with trauma-related conditions.

The clinic maintains an active presence on social media, sharing educational content and patient resources through their Instagram page. Additional information about treatment protocols and patient eligibility can be found on thier website as well.

Recognizing that cost can be a barrier to accessing innovative treatments, the clinic has partnered with CareCredit to offer financial assistance programs. These initiatives ensure that more patients can access potentially life-changing therapies regardless of their financial circumstances.

Patient testimonials featured in a recent media story highlight the transformative impact of these treatments. Veterans and civilians alike have shared their experiences of finding relief from conditions that had previously resisted multiple treatment attempts. These accounts are documented on the clinic's YouTube channel, where prospective patients can learn about treatment experiences firsthand.

IV Solution and Ketamine Centers of Chicago operates a state-of-the-art medical facility staffed by experienced anesthesiologists, registered nurses, and support personnel specializing in intravenous therapy administration. The clinic provides comprehensive screening and consultation services to determine patient suitability for various treatment options, ensuring safe and effective care delivery for individuals seeking alternatives to traditional mental health and pain management approaches.
