

# Go Industries Inc Introduces Topside Shovel Box for Commercial Work Trucks

*November 04, 2025*

Richardson, TX - November 04, 2025 -
Go Industries Inc, a Richardson, Texas-based manufacturer of heavy-duty truck accessories, has introduced a new topside shovel box designed specifically for commercial work trucks and fleet operators. The storage solution addresses the need for secure, accessible tool storage while maintaining easy installation and removal capabilities.

The new shovel box features perforated metal construction that allows dirt and debris to fall through, preventing accumulation within the storage compartment. Measuring 72 inches by 18 inches by 10 inches, the unit provides ample space for shovels and other long-handled tools commonly required in construction, landscaping, and utility work. The design accommodates both permanent mounting and slide-in configurations, allowing operators to choose between fixed installation or easy removal based on their operational requirements.

"Commercial truck operators need versatile storage solutions that can withstand demanding work

environments while providing quick access to essential tools," said a Go Industries spokesperson. "This topside shovel box represents our commitment to developing practical truck protection and storage equipment that meets the real-world needs of working professionals."

The shovel box joins an extensive line of truck accessories manufactured by Go Indsutries at their Texas facilities. The company's product portfolio includes heavy-duty headache racks, grille guards, bumper replacements, air flow tailgates, and mud flaps designed for various truck models including Dodge, Ford, Chevrolet, and GMC. All products are engineered to provide comprehensive truck protection against road debris, weather conditions, and the rigors of commercial use.

The perforated metal design serves multiple purposes beyond debris management. The construction material provides durability and strength while reducing overall weight compared to solid metal alternatives. This design approach aligns with industry trends toward equipment that balances functionality with fuel efficiency considerations for commercial fleets.

Installation flexibility remains a key feature of the new product. Fleet maintenance teams can complete installation using basic tools and standard mechanical knowledge, typically within an hour. The dual mounting options enable businesses to adapt the storage solution to different vehicles or operational scenarios without requiring specialized equipment or extensive modifications.

The introduction of the topside shovel box reflects broader industry demand for modular truck accessories that can be customized to specific work requirements. Commercial operators increasingly seek equipment that can be reconfigured as job requirements change, reducing the need for multiple specialized vehicles.

Go Industries Inc has been manufacturing truck accessories and commercial vehicle equipment since 1978. The company maintains Platinum Status with SEMA and manufactures all products in the United States. Their product line extends beyond standard truck accessories to include specialized equipment for law enforcement vehicles and custom manufacturing services for unique commercial applications. The company provides technical support for installation and maintenance procedures, backed by comprehensive warranty coverage on all manufactured products.
