

Go Industries Expands Truck Grille Guards Line with Advanced Winch Integration Systems

November 06, 2025

Richardson, TX - November 06, 2025 -
Go Industries has expanded its commercial-grade winch grille guard offerings to meet growing demand from fleet operators and commercial trucking companies across North America. The expansion introduces innovative modular systems that combine front-end protection with integrated winch mount capabilities for heavy-duty commercial applications.

The expanded product line addresses the increasing need for versatile protection solutions in the commercial trucking sector. The modular grille guard systems feature integrated winch mount capabilities that allow operators to customize their truck protection based on specific operational requirements. Each system accommodates both 9.5 and 16.5 winch carriers, providing flexibility for recovery equipment selection appropriate to vehicle weight and operational needs.

Constructed from 5/16 inch laser cut steel uprights with 2.5-inch 16-gauge steel cross tubes, the grille guards deliver substantial protection for commercial vehicles. The systems include custom heavy-duty mounting

brackets designed for maximum strength and simplified installation. Optional brush guards complement the vehicle lines while creating additional protection for the headlight area from road debris and off-road brush.

The enhanced offerings complement Go Industries' existing portfolio of truck protection equipment, including headache racks, bumper replacements, air flow tailgates, and mudguards. This comprehensive approach enables commercial operators to source multiple protection solutions from a single manufacturer, streamlining procurement and ensuring compatibility across product lines.

Go Industries has engineered the expanded line with installation efficiency as a priority. The modular design enables fleet maintenance teams to add or modify components without extensive vehicle modifications. Each system carries a three-year warranty covering materials, workmanship, and finish, with technical support available to assist commercial customers with installation requirements and maintenance procedures.

"The expansion of our winch grille guard line reflects our commitment to meeting the evolving needs of commercial truck operators who require both protection and recovery capabilities in a single integrated system," said a Go Industries spokesperson. "These modular systems allow fleet managers to adapt their truck safety equipment as operational requirements change, reducing vehicle downtime and maintenance costs."

The expansion comes as commercial trucking companies increasingly seek integrated solutions that combine multiple functionalities into a single system. Industry data indicates growing demand for modular protection equipment that can be adapted to varying operational conditions without requiring complete system replacement.

All products in the expanded winch grille guard line continue to be manufactured in the United States at Go Industries' Texas facilities. The company has been serving the truck accessories market since 1978, developing specialized equipment for commercial vehicles, law enforcement applications, and custom manufacturing projects.

Go Industries specializes in heavy-duty truck protection equipment and maintains Platinum Status with SEMA, reflecting the company's commitment to product quality and service excellence. The company's product portfolio includes front and back-end protection systems, specialized law enforcement vehicle equipment, and custom manufacturing capabilities for specific commercial requirements.
