

Go Industries Expands Winch Grille Guard Systems with Enhanced Modular Design

November 14, 2025

Richardson, TX - November 14, 2025 -
Go Industries Inc., a Richardson, Texas-based manufacturer of heavy-duty truck accessories, announces the expansion of its winch grille guard offerings with innovative commercial-grade integrated winch systems designed to meet the growing demands of commercial fleet operators and off-road enthusiasts.

The expanded product line features a modular-style grille guard system that serves as the foundation for adding winch carriers and brush guards, addressing the need for versatile front-end protection solutions in the commercial trucking and recreational vehicle markets. The system incorporates 5/16-inch laser-cut steel uprights paired with 2.5-inch, 16-gauge steel cross tubes, providing substantial protection for vehicles operating in challenging environments.

The Go Industries grille guard system includes custom heavy-duty mounting brackets engineered for maximum strength and simplified installation. The modular design allows vehicle owners to customize their front-end protection by adding optional brush guards that complement vehicle aesthetics while providing

additional protection to the headlight area from road debris and off-road brush. The system accommodates either 9.5 or 16.5 winch carriers, offering flexibility for different winching requirements.

"The expansion of our winch grille guard systems reflects our commitment to providing commercial-grade solutions that meet the evolving needs of our customers," said a Go Industries spokesperson. "Our modular approach allows fleet managers and individual truck owners to configure their front-end protection systems based on their specific operational requirements, whether they're managing a commercial fleet or preparing for off-road adventures."

The enhanced product line comes as demand for heavy-duty truck protection continues to grow across multiple sectors, including construction, agriculture, emergency services, and recreational off-roading. The modular design philosophy addresses installer feedback, incorporating features that streamline the installation process while maintaining the structural integrity required for commercial applications.

All components in the expanded winch grille guard system are manufactured in the United States and backed by a three-year warranty covering materials, workmanship, and finish. This warranty commitment underscores the company's confidence in the durability and quality of its products, particularly important for commercial operators who depend on their equipment for daily operations.

The expansion aligns with industry trends toward more adaptable vehicle protection systems that can be configured for specific applications without requiring complete system replacement. This modular approach reduces long-term costs for fleet operators while providing the flexibility to adapt vehicles for different roles as operational needs change.

Go Industries Inc. has been manufacturing truck accessories and custom equipment since 1978, specializing in front and rear-end protection systems, law enforcement vehicle equipment, and custom manufacturing solutions. The company maintains Platinum Status with SEMA, recognizing its commitment to quality and innovation in the automotive aftermarket industry. In addition to grille guards and winch systems, the company produces bumper replacements, headache racks, mud flaps, and specialized equipment for law enforcement vehicles.
