

Go Industries Expands Commercial Winch Grille Guards for Heavy-Duty Trucks

November 19, 2025

Richardson, TX - November 19, 2025 -
Go Industries has expanded its commercial-grade winch grille guard offerings to meet growing demand from fleet operators and commercial trucking companies across North America. The Texas-based manufacturer has enhanced its product line with innovative modular systems that combine front-end protection with integrated winch mount capabilities for heavy-duty commercial applications.

"The expansion of our winch grille guard systems reflects the evolving needs of commercial fleet operators who require adaptable protection solutions," said a Go Industries spokesperson. "These modular systems enable operators to configure their front-end protection without requiring complete system replacement when operational requirements change."

The expanded product line addresses the increasing need for versatile protection solutions in the commercial trucking sector. The modular grille guard systems feature integrated winch mount capabilities that allow operators to customize their worktruck protection based on specific operational requirements. Each system

accommodates both 9.5 and 16.5 winch carriers, providing flexibility for recovery equipment selection appropriate to vehicle weight and operational needs.

The grille guards are constructed from 5/16 inch laser cut steel uprights with 2.5-inch 16-gauge steel cross tubes, delivering substantial protection for commercial vehicles. The systems include custom heavy-duty mounting brackets designed for maximum strength and simplified installation. Optional brush guards complement the vehicle lines while creating additional protection for the headlight area from road debris and off-road brush.

Installation efficiency has been prioritized in the expanded line design. The modular construction enables fleet maintenance teams to add or modify components without extensive vehicle modifications. Each system carries a three-year warranty covering materials, workmanship, and finish, with technical support available to assist commercial customers with installation requirements and maintenance procedures.

The expansion comes as commercial trucking companies increasingly seek integrated solutions that combine multiple functionalities into a single system. Industry data indicates growing demand for modular protection equipment that can be adapted to varying operational conditions without requiring complete system replacement.

The enhanced products complement the existing portfolio of truck protection equipment, including headache racks, bumper replacements, air flow tailgates, and mudguards. This comprehensive approach enables commercial operators to source multiple protection solutions from a single manufacturer, streamlining procurement and ensuring compatibility across product lines.

All items in the expanded winch grille guard line continue to be manufactured in the United States at the Texas facilities. The company has been serving the truck accessories market since 1978, developing specialized equipment for commercial vehicles, law enforcement applications, and custom manufacturing projects. The expanded winch grille guard systems represent the latest development in the company's commitment to providing heavy-duty protection solutions for commercial and recreational vehicle applications.
