IV Solution & Ketamine Centers of Chicago Highlights Intravenous Ketamine Therapy Success Through Patient Stories

November 06, 2025

CHICAGO, IL - November 06, 2025 -

IV Solution & Ketamine Centers of Chicago has released a collection of patient testimonials documenting treatment outcomes for individuals suffering from treatment-resistant mental health conditions and chronic pain disorders. The clinic, recognized as Chicago's first private facility dedicated to intravenous ketamine therapy, has compiled these patient experiences to provide insight into the effectiveness of their specialized treatment protocols.

The media story features testimonials from multiple patients, including military veterans and civilians who have undergone treatment for conditions ranging from post-traumatic stress disorder to fibromyalgia. These accounts, available on the clinic's YouTube channel, document the experiences of patients like U.S. Army Veteran Jessica B., PTSD patient Ben Dziobek, Veteran Jessie Marquez, and others who have found relief through the clinic's specialized infusion protocols.

"Patient outcomes remain our primary focus as we continue to advance treatment options for those suffering from treatment-resistant conditions," stated Bal Nandra, M.D., Medical Director at IV Solution and Ketamine Centers of Chicago. "These testimonials represent real individuals who have experienced significant improvement in their quality of life through our comprehensive approach to intravenous therapy."

The clinic specializes in treating a range of conditions that often prove resistant to traditional therapies, including anxiety, chronic pain, treatment-resistant depression, fibromyalgia, obsessive-compulsive disorder, and PTSD. Their treatment protocols combine intravenous ketamine therapy with complementary approaches such as Stellate Ganglion Block injections for PTSD and NAD+ therapy for cognitive enhancement.

Ketamine infusion therapy works by administering carefully controlled doses of ketamine directly into the bloodstream, bypassing the digestive system for more immediate and effective results. This approach has shown particular promise for patients who have not responded to conventional treatments, offering hope to those who have exhausted other therapeutic options.

The facility has also expanded its treatment offerings to include Stellate Ganglion Block, a procedure involving an injection into the neck that blocks nerve signals associated with PTSD symptoms. Additionally, NAD+ therapy delivers a naturally occurring coenzyme directly into the bloodstream to support cognitive function and mental clarity.

"We recognize that each patient's journey is unique, which is why we develop individualized treatment plans based on specific conditions and medical histories," added Dr. Nandra. "Our multidisciplinary approach combines the latest advances in intravenous therapy with compassionate, patient-centered care."

To ensure treatment accessibility, the clinic has partnered with CareCredit to offer financial assistance programs for qualifying patients. This initiative addresses the financial barriers that often prevent individuals from accessing innovative mental health treatments.

IV Solution and Ketamine Centers of Chicago operates a state-of-the-art medical facility staffed by experienced anesthesiologists, registered nurses, and support personnel specializing in intravenous therapy administration. The clinic was established as Chicago's first private facility dedicated exclusively to ketamine infusion therapy and has since expanded its services to include additional evidence-based treatments for mental health conditions and chronic pain disorders. The facility maintains comprehensive patient resources including educational materials, treatment information, and ongoing support through multiple communication channels, including their dedicated YouTube channel.
