

Homeward Environmental Announces Successful Downspout Drainage Installation Milestone

November 17, 2025

November 17, 2025 -
Homeward Environmental LLC announced that the company has completed the installation of buried downspouts for 85 residential properties since this spring. The milestone comes as the environmental services company celebrates recent BBB accreditation and strong customer satisfaction ratings.

"Our success with downspout drainage systems has shown us that homeowners are looking for comprehensive solutions to protect their investments," said Devon Rogers, spokesperson for Homeward Environmental. "The same attention to detail and commitment to quality that we bring to our drainage work will now extend to helping homeowners reduce energy costs and improve comfort through professional insulation services."

On top of the successful installations and BBB accreditation, the company has also promoted two foremen to lead the Insulation and Energy Efficiency branch starting this winter. The two experienced foremen have demonstrated exceptional leadership in the company's drainage installation projects. This strategic expansion allows Homeward Environmental to offer comprehensive home protection services that address both water management and energy conservation needs.

The company's recent achievement of installing buried downspout systems for 85 homes represents significant growth in its core drainage services. These installations help protect home foundations by directing water away from structures, preventing costly water damage and basement flooding. The company has also accumulated more than 60 five-star reviews on Google, reflecting consistent customer satisfaction with its drainage and water management solutions.

Homeward Environmental's BBB accreditation, achieved over the summer, underscores the company's commitment to ethical business practices and customer service excellence. This accreditation provides additional assurance to homeowners seeking reliable contractors for essential home protection services.

The timing of the energy efficiency division launch aligns with increasing homeowner awareness about energy costs and the importance of proper insulation. By combining expertise in moisture management with energy efficiency services, Homeward Environmental can address multiple aspects of home protection and comfort in an integrated approach.

"We've learned that water management and energy efficiency often go hand in hand," added Rogers. "Proper drainage prevents moisture issues that can compromise insulation effectiveness, while good insulation helps prevent condensation problems that can lead to water damage. Our expanded services will allow us to provide more comprehensive solutions for homeowners."

Homeward Environmental LLC specializes in environmental services, including French drains, buried downspouts, yard drainage solutions, retaining walls, gutters, and gutter guards. The company designs and installs drainage systems to redirect surface water and groundwater away from structures, preventing foundation damage and landscape erosion. Each project receives personalized attention to ensure solutions meet specific property needs while adhering to industry standards and local regulations. With the addition of insulation and energy efficiency services, Homeward Environmental continues to evolve its offerings to meet growing demand for comprehensive home protection services.
