

Microsurgical Vasectomy Reversals by Dr. Mark Hickman Expands Services to Meet Growing Demand for Reversal Surgery

November 10, 2025

New Braunfels, TX - November 10, 2025 -
Microsurgical Vasectomy Reversals by Dr. Mark Hickman has announced an expansion of its specialized surgical services to accommodate increasing patient demand from across Texas, Louisiana, Oklahoma, and throughout the United States. The New Braunfels-based practice has enhanced its microsurgical capabilities and streamlined patient care protocols to better serve men seeking to restore their fertility following previous vasectomy procedures.

The expansion comes as more men nationwide explore family planning options and seek vasectomy reversal surgery as their circumstances change. Dr. Mark Hickman, who has performed thousands of successful procedures over his 26-year career, has refined his microsurgical techniques to achieve higher success rates through precise vas deferens repair.

"The demand for vasectomy reversals has grown significantly as more men reconsider their family planning

decisions," said Dr. Mark Hickman, microsurgical specialist. "Our enhanced protocols and refined techniques allow us to provide patients with improved outcomes while maintaining transparent, all-inclusive pricing that makes this important procedure accessible to more families."

The practice utilizes advanced operating microscopes and specialized suturing methods to perform each microsirgical vasectomy reversal. The procedure involves careful repair and alignment of the vas deferens, creating a watertight closure that significantly increases the likelihood of restored fertility. This meticulous approach has resulted in numerous successful pregnancies and births for patients who have undergone the procedure.

Dr. Hickman offers two comprehensive surgical options to accommodate different patient needs and preferences. The first option includes local anesthesia with oral sedation, while the second features IV sedation administered by a board-certified anesthesiologist. Both options include all surgical fees, facility costs, and follow-up care in a single transparent price structure with no hidden fees.

The practice has also expanded its support services for out-of-town patients, recognizing that many travel significant distances for the specialized procedure. These services include assistance with scheduling and information about local accommodations, making it easier for patients from distant locations to access care.

"Patients often come to us after considerable thought and planning, and we understand the importance of this decision in their lives," noted Dr. Hickman. "Our comprehensive approach ensures they receive not just excellent surgical care, but also the education and support they need throughout the process."

The practice provides extensive patient education resources, including detailed procedure information, frequently asked questions, and patient testimonials. These resources help potential patients understand the procedure, recovery process, and expected outcomes before making their decision.

Microsurgical Vasectomy Reversals by Dr. Mark Hickman specializes exclusively in vasectomy reversal procedures. Based in New Braunfels, Texas, the practice has established itself as a leading provider of microsurgical vasectomy reversals, serving patients from across the southwestern United States and beyond. Dr. Hickman's 26 years of experience and thousands of successful procedures have made the practice a trusted choice for men seeking to restore their fertility through advanced microsurgical techniques.
