Glaucoma in Sioux Falls: Vance Thompson Vision?s Longstanding Commitment to Care and Research

November 04, 2025

SIOUX FALLS, SD - November 04, 2025 -

Glaucoma remains one of the leading causes of blindness in the United States, often progressing silently until vision loss has already occurred. Known as the ?silent thief of sight,? the disease affects millions of Americans, and its prevalence continues to rise with age. For decades, Vance Thompson Vision in Sioux Falls has been at the forefront of both glaucoma treatment and research, providing patients across the region with advanced care options designed to slow the progression of this disease and protect long-term vision.

Glaucoma is a complex eye condition caused by elevated intraocular pressure that damages the optic nerve. The disease most often begins with subtle loss of peripheral vision and, if left untreated, can advance to central vision loss and irreversible blindness. According to the National Eye Institute, glaucoma is the second leading cause of blindness worldwide, with more than three million people in the United States currently living with the disease. Despite these daunting statistics, Vance Thompson Vision emphasizes that with proper detection, diagnosis, and management, glaucoma does not have to prevent patients from living full, active lives. The practice?s Sioux Falls location has built a reputation for blending compassionate care with advanced technology, offering comprehensive solutions to manage this lifelong condition.

Central to glaucoma care at Vance Thompson Vision is the wide range of treatment options available. For many patients, eye drops and oral medications provide effective first-line management by lowering intraocular pressure and minimizing risk of optic nerve damage. Others may benefit from in-office laser treatments, which target the eye?s drainage system to improve fluid outflow and stabilize pressure. As research and technology continue to evolve, MIGS procedures have become an increasingly common choice, often performed in conjunction with cataract surgery to address both conditions through a single incision. For patients with advanced glaucoma, traditional surgeries such as trabeculectomy or tube shunt implantation remain critical tools in protecting vision. By offering this full spectrum of care, the Sioux Falls team ensures that treatment plans can be tailored precisely to each patient?s needs.

The Sioux Falls team includes a distinguished roster of ophthalmologists and optometrists dedicated to glaucoma care. Their expertise spans every aspect of disease management, from early detection to advanced surgical intervention. These doctors bring decades of combined experience and remain committed to educating patients about their condition, explaining treatment options clearly, and guiding them through the lifelong management process. By fostering a collaborative environment, they ensure each patient receives individualized care and ongoing support.

Education and prevention are equally important elements of the practice?s mission. Because glaucoma often progresses without noticeable symptoms, annual eye exams remain the most effective way to detect the disease early. Routine testing, including measurement of intraocular pressure and optic nerve evaluation, can identify glaucoma in its earliest stages before significant damage occurs. For individuals with a family history of the disease, routine screening is particularly critical, as genetics are a known risk factor. The Sioux Falls team consistently emphasizes the importance of proactive care, underscoring that early diagnosis can make the difference between preserving vision and facing irreversible loss.

Glaucoma remains a serious disease with no known cure, but the efforts of practices like Vance Thompson Vision in Sioux Falls offer hope for those diagnosed. By combining extensive clinical experience, participation in leading-edge research, and a patient-centered approach, the practice continues to deliver excellence in glaucoma management. Their dedication to halting disease progression and protecting vision has made them a trusted resource not only for patients in Sioux Falls but also for the broader medical community seeking expertise in this challenging condition.

For reporters covering health, medical research, and community well-being, glaucoma remains an urgent public health issue with far-reaching impact. As the population ages, the number of Americans living with glaucoma is expected to rise substantially in the coming decades. Highlighting the work of experienced teams such as those at Vance Thompson Vision offers an opportunity to connect readers with credible information and local resources. Reporters are encouraged to reach out to the Sioux Falls team for insights into current treatment options, the future of glaucoma research, and the importance of early detection in preventing

blindness.

For prospective patients, the Sioux Falls location of Vance Thompson Vision continues to serve as a beacon of hope and innovation in glaucoma care. Their long history of research involvement and clinical excellence ensures that individuals diagnosed with glaucoma can trust they are receiving world-class care close to home. The practice?s mission to protect and preserve vision stands as a vital contribution to the Sioux Falls community and beyond.
