APS Environmental Expands Dumpster Rental Services for Residential and Commercial Projects

November 04, 2025

NORTH HIGHLANDS, CA - November 04, 2025 -
APS Environmental, a licensed environmental services company serving residential and commercial clients, has expanded its focus on dumpster rental solutions to meet growing demand from homeowners and contractors managing waste disposal for construction, renovation, and cleanup projects.

The expansion comes as property owners and construction professionals seek reliable waste management partners capable of providing timely delivery and pickup services for projects ranging from home renovations to large-scale construction sites. APS Environmental now offers comprehensive dumpster rentals alongside its established septic, sewer, and hydro excavation services.

"We recognized that many of our residential and commercial clients needed a trusted partner for waste disposal during their projects," said B. Hage, operations manager at APS Environmental. "By expanding our dumpster rental offerings, we can provide the same level of professional service our customers expect from us across all their environmental and waste management needs."

The company's dumpster rental service addresses various project requirements, from small residential

cleanouts to major construction debris removal. Homeowners undertaking renovations, decluttering projects, or storm damage cleanup can access appropriate container sizes for their specific needs. Similarly, contractors working on demolition, construction, or landscaping projects benefit from flexible rental terms and reliable scheduling.

APS Environmental maintains its commitment to environmental responsibility through proper waste disposal practices and compliance with local regulations. The company ensures that collected materials are processed according to environmental standards, with recyclable materials diverted from landfills whenever possible.

The expansion into focused waste container services complements the company's existing portfolio of environmental solutions. Property owners preparing for home sales can now coordinate multiple services through a single provider, combining septic inspections, sewer line evaluations, and waste removal services as needed.

Contractors particularly benefit from the integrated service approach, as many construction and renovation projects require both waste disposal solutions and specialized services such as utility locating, hydro excavation for sensitive underground work, or sewer line repairs. This comprehensive capability streamlines project management and reduces coordination complexity.

The timing of the service expansion aligns with increased construction and renovation activity across residential and commercial sectors. Property improvement projects often generate substantial waste volumes that exceed regular disposal capacity, making professional dumpster rental services essential for maintaining clean, safe work sites.

APS Environmental operates with license number 985553 and provides 24/7 emergency services for urgent environmental needs. The company specializes in sewer system solutions, septic system services, hydro excavation, trenchless sewer repair, vacuum truck services, pipeline management, and waste management services. Their technical capabilities include CCTV pipe inspections, high-pressure hydro jetting, pipe relining, and specialized cleaning services for grease traps, lift stations, and storm drain systems.

The company maintains an active presence across multiple service categories, from residential septic tank pumping and leach field rejuvenation to commercial pipeline rehabilitation and municipal sludge management. Their vacuum truck fleet handles various waste removal and transport needs, while their hydro excavation services provide precise, non-destructive digging for utility work and underground infrastructure projects.
