

## **Moment of Clarity Publishes New Resource Detailing How TMS Therapy Is Transforming Mental Health Treatment**

*November 15, 2025*

RESEDA, CA - November 15, 2025 - PRESSADVANTAGE -

Moment of Clarity has released a new educational publication titled Transcranial Magnetic Stimulation in California, providing evidence-based insight into how transcranial magnetic stimulation (TMS) is improving outcomes for people living with depression, anxiety, and treatment-resistant mood disorders. The resource, now available on the Moment of Clarity website, explores how this innovative therapy supports brain function and complements outpatient and intensive outpatient (IOP) mental health programs.

According to the National Institute of Mental Health (NIMH), major depressive disorder affects more than 21 million adults in the United States, with many not responding to conventional treatments like medication or psychotherapy alone. TMS therapy offers a non-invasive alternative that utilizes magnetic pulses to stimulate neural pathways involved in regulating mood. Clinical studies published in *The Journal of Clinical Psychiatry* report that approximately 60% of patients treated with TMS experience meaningful improvement, and nearly one-third achieve complete remission.

The Moment of Clarity resource explains that TMS therapy is particularly effective for treatment-resistant depression, a condition that occurs when patients do not respond to at least two different antidepressant medications. By targeting specific areas of the brain, particularly the prefrontal cortex, TMS helps restore normal patterns of neural activity. The publication highlights research from Biological Psychiatry, which found that this therapy can significantly enhance mood and cognitive function, even among patients with long-standing depressive symptoms.

Moment of Clarity in Reseda integrates TMS therapy into a continuum of care that includes cognitive-behavioral therapy (CBT), dialectical behavior therapy (DBT), medication management, and trauma-focused interventions. This multimodal approach aligns with guidelines from the Substance Abuse and Mental Health Services Administration (SAMHSA), which recommends combining psychotherapy and brain-based interventions for optimal results. The resource clarifies that TMS therapy is not a standalone treatment but rather part of a structured, supervised care plan overseen by licensed clinicians.

In surrounding communities such as Studio City Foothills, North Hills West, Mission Hills, Woodland Hills, and North Hollywood, there has been a growing need for accessible, outpatient-based mental health treatment. Moment of Clarity's resource highlights how outpatient and partial hospitalization (PHP) programs offer flexibility for patients seeking consistent, evidence-based care without requiring full residential admission. According to the Psychiatric Services Journal, outpatient and IOP models significantly improve treatment engagement and long-term recovery rates compared to inpatient-only care.

The publication also discusses the biological mechanisms that make TMS an essential advancement in the treatment of depression. Traditional antidepressants often target neurotransmitters such as serotonin or dopamine, but TMS therapy directly influences the brain's electrical activity, promoting neuroplasticity—the brain's ability to form new neural connections. This process is linked to improved mood regulation, concentration, and energy levels. Research published in Nature Neuroscience confirms that patients undergoing TMS therapy exhibit increased brain connectivity in regions associated with motivation and emotional processing.

Moment of Clarity's educational resource also underscores the therapy's safety profile. TMS does not require anesthesia or medication, and side effects are typically mild and temporary, such as minor scalp discomfort during treatment. The American Journal of Psychiatry notes that less than 5% of patients discontinue treatment due to side effects, making TMS one of the safest brain stimulation therapies currently available.

The article further highlights how TMS therapy integrates seamlessly with outpatient programs at mental health centers, such as Moment of Clarity. Patients participating in IOP or PHP programs can receive daily or

weekly sessions while continuing other therapeutic activities such as CBT, group therapy, and medication management. For residents in areas like Woodland Hills or Mission Hills, this hybrid model supports both clinical oversight and personal independence, helping patients maintain their work, school, or family commitments while receiving comprehensive care.

Moment of Clarity's publication also highlights the role of group therapy in supporting long-term recovery. Studies from The Journal of Mental Health Counseling indicate that people who participate in group-based support alongside individual therapy experience higher levels of resilience and social connection. The resource explains how group therapy for trauma survivors, combined with TMS and psychotherapeutic methods, provides a multidimensional approach to emotional healing.

As awareness of depression and anxiety grows across North Hollywood and North Hills West, the need for scientifically validated, accessible care continues to expand. The new resource reflects Moment of Clarity's commitment to evidence-based education and transparency in mental health treatment. It provides factual, verifiable information to help patients, families, and healthcare professionals understand how TMS can be part of a structured treatment plan that addresses both biological and psychological aspects of recovery.

By introducing Transcranial Magnetic Stimulation in California, Moment of Clarity contributes to the public's understanding of modern mental health treatment. The article reinforces that recovery from depression and other mental health challenges is achievable when patients have access to advanced therapies, comprehensive outpatient programs, and consistent professional support.

Residents in Reseda and nearby neighborhoods—including Studio City Foothills, North Hills West, Mission Hills, Woodland Hills, and North Hollywood—can learn more about TMS therapy and other outpatient services by visiting the Moment of Clarity Reseda. The publication serves as an educational resource for anyone seeking verified information on innovative, evidence-based approaches to mental health care.
