

IV Solution & Ketamine Centers of Chicago Highlights Treatment Advances for Anxiety and Chronic Pain Management

November 13, 2025

CHICAGO, IL - November 13, 2025 - PRESSADVANTAGE -

IV Solution and Ketamine Centers of Chicago continues to expand its role as a leading provider of innovative intravenous therapies for patients struggling with treatment-resistant mental health conditions and chronic pain disorders. The medical facility, recognized as the first private clinic in Chicago dedicated to ketamine infusion therapy, reports increased patient inquiries for alternative treatments as traditional therapies prove insufficient for many individuals.

"The demand for ketamine therapy has grown significantly as more patients and healthcare providers recognize its effectiveness for conditions that have not responded to traditional medications," said Bal Nandra, M.D., Medical Director at IV Solution and Ketamine Centers of Chicago. "We are seeing particularly strong results in patients with fibromyalgia and treatment-resistant depression who have exhausted other options."

The clinic specializes in administering clinically proven therapy for chronic pain alongside treatments for anxiety, depression, PTSD, OCD, and fibromyalgia. Recent data from the National Institute of Mental Health indicates that approximately 30 percent of patients with major depressive disorder do not respond adequately to conventional treatments, highlighting the critical need for alternative therapeutic approaches.

The facility offers comprehensive treatment protocols including intravenous ketamine therapy, Stellate Ganglion Block injections for PTSD, and NAD+ therapy for cognitive enhancement. Each treatment plan is customized to address individual patient needs and administered by board-certified anesthesiologists and registered nurses in a controlled medical environment.

Ketamine therapy works differently from traditional antidepressants by targeting NMDA receptors in the brain, often providing rapid relief for patients who have struggled with symptoms for years. The treatment has shown particular promise for individuals with chronic pain conditions, offering an alternative to long-term opioid use.

The clinic has also implemented financial assistance programs through partnerships with healthcare financing organizations, recognizing that cost can be a barrier to accessing innovative treatments. This initiative ensures that more patients can explore ketamine therapy as a viable treatment option.

Patient testimonials and clinical outcomes have become an important part of the clinic's ongoing media story, with many individuals reporting significant improvements in their quality of life after undergoing treatment. Veterans with PTSD, individuals with fibromyalgia, and patients with treatment-resistant depression have shared their experiences through various platforms, contributing to increased awareness of ketamine therapy's potential benefits.

IV Solution and Ketamine Centers of Chicago operates as a specialized medical facility providing intravenous ketamine therapy, Stellate Ganglion Block treatments, and NAD+ infusions for patients with treatment-resistant mental health conditions and chronic pain disorders. The clinic serves the greater Chicago area with customized treatment protocols designed to address conditions that have not responded to conventional therapies.
