Knowledge Train Launches AgilePM Practitioner v3 Course

December 08, 2025

LONDON, UK - December 08, 2025 -

Knowledge Train, a professional training provider based in London, England, has announced the launch of its AgilePM Practitioner v3 training course in December 2025, offering flexible classroom and online learning options for professionals seeking to advance their agile project management capabilities. The AgilePM Practitioner v3 course is designed to equip project managers, team members, and professionals working on agile projects with internationally recognised certification that validates competence in managing projects using Agile frameworks. The training addresses the growing demand for structured yet flexible project delivery methods across industries undergoing digital transformation and organisational change. The course is available in multiple formats, including two-day classroom sessions and self-paced online modules accessible for 12 months, catering to professionals with varying schedules and learning preferences. Knowledge Train's AgilePM Practitioner v3 certification enables participants to communicate and participate effectively on agile projects whilst increasing confidence in making positive contributions within their organisations.

The certification programme has been developed to meet the needs of anyone working on agile projects, aspiring or current project managers, project team members wanting to learn to manage agile projects, and

non-project professionals seeking an overview of agile project management methodologies. Jay Gao, Operations Manager at Knowledge Train, explained the significance of the new course launch: "The AgilePM Practitioner v3 certification represents a critical milestone for professionals seeking to validate their agile project management expertise in an increasingly competitive marketplace. This qualification provides participants with practical skills to apply the underpinning philosophy and principles of agile in real project situations, enabling them to configure project lifecycles appropriately and produce relevant agile products. Our training approach combines accredited materials from APMG with comprehensive exam preparation, sample exams, and additional resources including three months of free Agile Business Consortium membership upon passing the examination." The course includes training materials accredited by APMG, the AgilePM Practitioner exam, and access to professional development resources designed to support career advancement.

Professionals interested in advancing their agile project management credentials can access comprehensive information about the AgilePM Practitioner v3 course through Knowledge Train's dedicated course page. The training programme covers essential topics including agile fundamentals, individuals and interactions, collaboration and communication, risk management and project approach, defining and estimating work, planning and controlling projects, and governance and compliance with AgilePM products. The classroom-based AgilePM Practitioner course runs for two days from 9:00am to 5:00pm, whilst the self-study online version requires approximately 15 hours of study time with 12 months of course access. For those requiring foundational knowledge, Knowledge Train also offers a combined AgilePM Practitioner with Foundation course, delivered over five days in classroom format or 43 hours of self-study online. The training has achieved a 99% first-time pass rate amongst students, reflecting the quality of instruction and preparation materials provided. All courses include professional CV writing services with one year of free updates and one month's free subscription to the Business Learning Library.

The benefits of AgilePM Practitioner certification extend beyond individual career development to deliver measurable organisational value, according to Knowledge Train. Jay Gao, Operations Manager at Knowledge Train, emphasised the broader impact of agile project management training: "Organisations investing in AgilePM Practitioner certification for their teams consistently report improved productivity, adaptive delivery capabilities, and enhanced risk management across project portfolios. The certification provides professionals with recognition within their organisations as individuals who understand how to manage agile projects effectively, whilst the internationally recognised credential enables them to take their skills anywhere in the world. The structured approach taught in the AgilePM Practitioner v3 course balances agile flexibility with necessary project governance, creating an environment where teams can deliver faster whilst maintaining improved control and generating higher stakeholder value." The AgilePM Practitioner exam comprises 60 objective-testing scenario-based questions, requires a 50% pass mark, and allows 120 minutes for completion in an open-book format, with results provided the same day.

The launch of the AgilePM Practitioner v3 course reflects the evolving landscape of project management, where traditional waterfall methodologies are increasingly complemented or replaced by agile approaches that support rapid innovation and continuous delivery. As organisations across sectors including technology, finance, healthcare, and government services embrace digital transformation initiatives, the demand for professionals with validated agile project management competencies continues to grow. The AgilePM framework taught in the course introduces iterative project planning and team collaboration aligned with business goals, promoting transparency, iterative delivery, and continuous improvement across project stages. The methodology complements other agile approaches including Scrum, Lean, and Kanban, enabling cross-framework alignment for organisations employing multiple project management methodologies. The certification pathway typically begins with AgilePM Foundation level before progressing to Practitioner status, ensuring participants possess the necessary foundational knowledge before advancing to scenario-based application of agile principles. Knowledge Train's training delivery incorporates the latest best practices in e-learning for online courses, utilising interactive exercises designed to aid deeper understanding and longer-lasting learning rather than simply filming classroom instruction.

Knowledge Train provides professional training and certification programmes across project management, agile methodologies, IT service management, and business analysis disciplines. The organisation delivers accredited training through experienced instructors and innovative online learning platforms designed to accommodate the schedules of working professionals. Further information about Knowledge Train's complete range of training courses, certification programmes, and learning options is available through the company's main website, where prospective students can explore course details, review upcoming classroom dates, and access online enrolment options for self-paced learning programmes.
