IV Solution & Ketamine Centers of Chicago Expands Fibromyalgia Management Solutions Through Treatment Protocols

November 18, 2025

CHICAGO, IL - November 18, 2025 -

IV Solution & Ketamine Centers of Chicago, the city's first private facility dedicated to intravenous ketamine therapy, announces expanded treatment protocols specifically designed to address the complex symptoms of fibromyalgia and related chronic pain conditions. The medical clinic has enhanced its comprehensive approach to include specialized infusion therapies that target the multifaceted nature of fibromyalgia, offering new hope to patients who have found limited relief through conventional treatments.

The center's expanded protocols incorporate customized ketamine infusion regimens administered by board-certified anesthesiologists and registered nurses with specialized training in pain management. These treatments address not only the chronic pain associated with fibromyalgia but also the accompanying symptoms of anxiety, depression, and cognitive dysfunction that often plague patients with this condition.

"Fibromyalgia presents unique challenges because it affects multiple systems in the body simultaneously,"

states Bal Nandra, M.D., a representative from IV Solution and Ketamine Centers of Chicago. "Our enhanced protocols recognize that effective treatment requires addressing both the physical pain and the neurological components of the condition. Ketamine therapy has shown remarkable results in breaking the pain cycle while also alleviating the depression and anxiety that frequently accompany chronic pain conditions."

The clinic's approach to fibromyalgia treatment extends beyond ketamine infusions to include complementary therapies such as NAD+ infusions for cognitive enhancement and energy restoration. This multi-modal strategy reflects current understanding of fibromyalgia as a condition requiring comprehensive intervention rather than single-symptom management.

Patient outcomes have demonstrated significant improvements in pain levels, sleep quality, and overall functionality. The center has documented these success stories through various platforms, including their Facebook page, where patients share their treatment experiences. Many individuals who had exhausted traditional treatment options report substantial symptom relief following the customized infusion protocols.

The facility also addresses treatment-resistant depression, PTSD, OCD, and chronic pain conditions through its specialized infusion therapies. Each treatment plan undergoes careful customization based on individual patient assessment and medical history, ensuring optimal therapeutic outcomes while maintaining strict safety protocols.

Recognizing that innovative treatments must remain accessible, the center has established financial assistance programs through partnerships with healthcare financing organizations. This initiative ensures that cost barriers do not prevent patients from accessing potentially life-changing treatments.

The growing interest in ketamine therapy for fibromyalgia and chronic pain management reflects a broader shift in pain medicine toward addressing underlying neurological dysfunction rather than merely masking symptoms. This media story represents part of the evolving landscape of chronic pain treatment, where innovative approaches offer new possibilities for patients who have struggled with inadequate relief from conventional therapies.

IV Solution and Ketamine Centers of Chicago operates as a specialized medical facility providing intravenous ketamine therapy, Stellate Ganglion Block injections for PTSD, and NAD+ therapy. The clinic maintains a state-of-the-art facility staffed by board-certified anesthesiologists and registered nurses, offering evidence-based treatments for mental health conditions and chronic pain disorders.
