

Non Acetone Nail Varnish Remover On The Way To Amazon Fulfillment Center

March 23, 2016

March 23, 2016 - PRESSADVANTAGE -

Beaverton, OR business Pure Vitality Beauty is proud to announce that their first batch of natural nail polish remover has now left their USA factory and is on its way to the Amazon.com fulfillment center. The non acetone nail polish remover has been long awaited and was actually developed at the request of customers. The company expects this product to become popular because it does not contain acetone, which is a chemical that can be dangerous to one's health.

Pure Vitality Beauty founder Keegan Allen says: "We have developed what we believe to be the best non acetone nail polish remover on the market and it will soon be available for purchase. The product is 100% natural and plant based. This means it helps to make the nails and cuticles strong, healthy and well-conditioned as well. Our product is USDA BioCertified chemical free and non toxic, meaning there are also no fumes. It is safe for the environment, and even children can use it."

The product is quite unique in the fact that it doesn't contain acetone, the staple ingredient in the standard nail polish removers. Acetone is a highly toxic substance that can lead to shock when inhaled and various dangerous effects when ingested. Pure Vitality Beauty focuses on creating products that will not damage the health and well-being of their customers, or the environment itself. When they received messages from a number of client stating that their line of products was missing a natural nail varnish remover, they got to work on this.

"A number of customers told us that it would be nice if they could safely remove their nail polish as well," adds Keegan Allen. "We immediately started to think about whether or not this would be possible and we're so happy with the result. We just know our customers will love it as well."

The acetone free nail polish remover is high performing but won't dry out the nails. Rather, it provides strength and moisture to the nails, something other removers don't do either. It can even be used on UV gel nail polish, which is traditionally difficult to remove. Every ingredient in the remover is rated 0 or 1 in the cosmetic safety review, meaning it is non-carcinogenic, non-toxic and non-hazardous both to people and the

environment. Additionally, it is fully eco-friendly, meaning it biodegrades fully and quickly.
