Elevate Medical Aesthetics & Wellness Center Announces Relocation to New Ardmore Location

November 18, 2025

ARDMORE, PA - November 18, 2025 -
Elevate Medical Aesthetics has announced the relocation of its practice to a new location at 2525 Haverford Rd, 1st Floor, Ardmore, PA 19003, marking a development in its operational expansion and ability to accommodate patient demand. The move became effective this month and reflects the center?s continued focus on providing a structured environment for wellness and aesthetic services under the direction of its owner and operator, Jennifer Brennan.

?The new location supports the systems and workflow needed for safe and consistent patient care,? said Jennifer Brennan, owner at Elevate Medical Aesthetics. ?This move allows our team to continue delivering services within a setting designed to meet current regulatory and clinical standards.?

Elevate Medical Aesthetics operates as a medical spa under the oversight of a board-certified nurse practitioner. The practice was founded in 2021 after Brennan completed her aesthetic certification in 2019 and integrated it with more than two decades of healthcare experience. Her background spans pain management, primary care, and critical care, and her professional development has included advanced certifications in neurotoxin administration, dermal fillers, microneedling, and PRP/PRF procedures. The

center?s relocation establishes a space configured to meet these practice requirements while maintaining compliance expectations for medical environments.

The Ardmore location provides expanded treatment rooms and administrative areas that support scheduling, consultation workflows, charting protocols, and sterilization processes. The configuration is designed to streamline operational efficiency while maintaining defined separation between clinical and non-clinical functions. The relocation also facilitates improved access for patients through onsite parking availability and first-floor entry. The center indicated that these logistical adjustments were evaluated over several months before finalizing the transfer.

Since its founding, Elevate Medical Aesthetics has developed its offerings around aesthetic and wellness-related procedures permitted within a medical spa setting. The practice maintains a focus on preventive health principles, with Brennan integrating educational guidance on lifestyle factors and general wellness strategies during consultations. The approach aligns with her ongoing certification in health and wellness nurse coaching. These components are incorporated as informational elements within patient interactions rather than as prescriptive medical directives.

Brennan?s career has included more than 25 years of clinical experience, which has informed the center?s operational policies and safety procedures. Her training in multiple healthcare disciplines provides a framework for patient intake practices, informed consent processes, risk assessment, and follow-up protocols. Her role includes oversight of all clinical workflows, review of documentation requirements, and maintenance of professional standards for the categories of services the center offers. The relocation allows for updated equipment placement, workflow mapping, and space utilization consistent with these administrative responsibilities.

The center has noted that the new facility also supports the integration of educational initiatives for patients seeking information about aesthetic or wellness services. The expanded office layout accommodates private consultation areas where clinicians can discuss treatment planning, procedural expectations, and general wellness considerations. These interactions are intended to support informed decision-making by presenting clear factual information about available options without promotional emphasis or guarantees of outcomes.

Elevate Medical Aesthetics continues to develop its operational model through structured scheduling, staff coordination, and adherence to industry standards. The relocation marks a logistical progression for the practice as it seeks to align its physical environment with its administrative and clinical requirements. Brennan?s background in both acute and outpatient care has influenced the design choices made for the new space, particularly regarding patient flow, safety considerations, and documentation processes.

The organization will maintain its standard communication channels during the transition. Individuals seeking additional information about the relocation, administrative processes, or general practice policies may contact the center at (484) 275-0403. The facility?s website provides further details regarding operational hours, practitioner background, and service categories offered by the center. Elevate Medical Aesthetics continues to update its online platform to ensure accurate information remains available as facility adjustments are completed.
