IV Solution & Ketamine Centers of Chicago Highlights Advances in Treatment Resistant Depression (TRD) and Chronic Pain

November 24, 2025

CHICAGO, IL - November 24, 2025 -
IV Solution & Ketamine Centers of Chicago continues to provide specialized infusion therapies for patients struggling with treatment-resistant mental health conditions and chronic pain disorders, addressing a growing need for alternative therapeutic approaches in the medical community.

The Chicago-based medical facility specializes in intravenous ketamine therapy for conditions that have not responded to conventional treatments, including treatment-resistant depression, anxiety, PTSD, OCD, fibromyalgia, and chronic pain. As the city's first private facility dedicated to these specialized infusion treatments, the center has established comprehensive protocols administered by board-certified anesthesiologists and registered nurses with specialized training.

The facility's treatment approach extends beyond ketamine infusions to include Stellate Ganglion Block injections for PTSD and NAD+ therapy for cognitive enhancement. The Stellate Ganglion Block procedure

involves targeted injections that block nerve signals contributing to PTSD symptoms, while NAD+ infusions help improve mental clarity, concentration, and memory function.

"Patients who have exhausted traditional treatment options often find significant relief through our customized infusion protocols," said Bal Nandra, M.D., Medical Director at IV Solution and Ketamine Centers of Chicago. "We see remarkable improvements in pain levels, mood stabilization, and overall functionality, particularly in cases where standard medications and therapies have proven insufficient."

For patients with fibromyalgia, the center has developed specialized protocols that address both the chronic pain and accompanying symptoms such as anxiety, depression, and cognitive dysfunction. This comprehensive approach reflects current medical understanding that complex conditions require multi-modal intervention strategies.

To ensure accessibility, the clinic has partnered with CareCredit to offer financial assistance programs, recognizing that cost should not be a barrier to potentially life-changing treatment. Each treatment plan is customized based on individual patient assessment and medical history, with strict safety protocols maintained throughout the infusion process.

The center maintains an active presence on social media platforms, sharing patient testimonials and educational content through their Instagram account and YouTube channel. Additional information about treatment options and patient resources can be found on their website.

The growing interest in ketamine therapy has been featured in a recent media story highlighting its effectiveness for treatment-resistant conditions. Research continues to support the use of carefully administered ketamine infusions for patients who have not found relief through traditional psychiatric medications or pain management approaches.

IV Solution and Ketamine Centers of Chicago operates as a specialized medical facility providing evidence-based infusion therapies in a state-of-the-art clinical setting. The center treats various mental health conditions including depression, anxiety, PTSD, bipolar disorder, and OCD, as well as chronic pain conditions such as migraines and fibromyalgia. With a focus on personalized treatment protocols and comprehensive patient care, the facility continues to serve patients seeking alternative therapeutic options when conventional treatments have not provided adequate relief.
