Dr. Adam Foleck to Showcase Advanced Implant Techniques in Live Surgical Training Event

November 19, 2025

NORFOLK, VA - November 19, 2025 -

The Foleck Center is pleased to announce a significant educational event in the field of implant dentistry, as Dr. Adam Foleck prepares to host a live dental implant surgery training on December 13, 2025. This high-level continuing education experience is designed for practicing clinicians who want to deepen their surgical knowledge, observe advanced techniques directly, and gain valuable insight into modern implant protocols that reflect today?s standards of clinical excellence. The upcoming event, which will be offered both live and virtually, represents an important opportunity for dental surgeons who value hands-on, real-time instruction from a leader in implantology. With a limited number of seats available, interest in the course has exceeded expectations, and The Foleck Center anticipates a strong turnout from doctors across the region and beyond.

The live portion of the course will welcome twenty-six dental surgeons who will attend in person to observe Dr. Foleck as he performs a complete dental implant procedure from start to finish. Attendees will have the benefit of seeing the surgical process unfold in real time, with Dr. Foleck explaining each step, discussing the rationale behind his chosen techniques, and demonstrating the precision and efficiency that have become hallmarks of his work. Through this direct surgical exposure, participants will gain a level of understanding

that cannot be matched through textbooks, slides, or prerecorded material. Watching a live implant procedure offers a unique perspective into decision-making, instrumentation, tissue handling, sequencing, and the minute details that define a successful surgical outcome. For many clinicians, especially those expanding into implant placement or looking to refine their protocols, the chance to witness an expert?s approach in a real clinical environment is invaluable.

In addition to the doctors who will attend on-site, the event will be broadcast virtually to allow remote participants to benefit from the same detailed instruction and live surgical visualization. The livestream format will integrate multi-angle viewing, close-up surgical imaging, and clear narration, enabling doctors anywhere in the country to follow along with the full procedure. Virtual attendees will have the ability to observe every moment of the surgery and access the educational commentary without the need to travel, making the program accessible to a wider audience of dental professionals who want to stay at the forefront of implant dentistry. This dual-delivery model reflects the Foleck Center?s commitment to making high-quality continuing education available to clinicians regardless of location, schedule, or practice obligations.

Dr. Adam Foleck expressed enthusiasm for the upcoming event and the opportunity it provides to support professional growth within the dental community. ?Implant dentistry continues to evolve at a remarkable pace, and staying current with the latest techniques is essential for delivering exceptional care,? said Dr. Foleck. ?This course is designed not just to show the surgical steps, but to explain the reasoning behind them?why certain approaches lead to better outcomes, how to plan effectively, and how to minimize complications. I want every doctor who attends to walk away with practical, immediately applicable knowledge that will elevate their confidence and the care they provide to their patients.?

Dr. Foleck, who has built a reputation for excellence in implant dentistry, lectures nationally and is recognized for his commitment to high-level training. He teaches implant courses in partnership with a respected continuing education program based in Chicago, where he works closely with dental surgeons seeking advanced certification and hands-on mentorship. His teaching philosophy centers on transparency, precision, and open discussion?qualities that have earned him praise from students and colleagues alike. The December 13 event at The Foleck Center headquarters in Virginia Beach, Va, continues this tradition by giving attendees a direct, unfiltered view of live surgical care rather than curated or edited content. This transparency allows clinicians to learn from real-life variables, subtle technical adjustments, and the thought processes that guide every decision in surgery.

Dr. Adam Foleck and The Foleck Center has long been committed to fostering professional development in the dental field. By providing access to high-quality continuing education, the center helps clinicians improve their skills, expand their knowledge base, and offer better outcomes for their patients. The upcoming live implant training reflects this mission and highlights the center?s belief that meaningful learning happens when clinicians are able to observe authentic clinical procedures and engage with instructors who are passionate

about advancing the profession. The ability to ask questions, discuss surgical choices, and analyze real cases creates a level of engagement that traditional lecture-based courses cannot replicate.

Participants in the program will see a complete implant workflow, including case planning, patient assessment, surgical sequencing, and implant-placement techniques that prioritize both efficiency and long-term stability. Dr. Foleck will guide attendees through considerations such as anatomical evaluation, osteotomy preparation, soft tissue management, and implant positioning. Additionally, the training will touch on instrumentation, digital workflow integration where appropriate, and practical strategies for reducing patient discomfort and minimizing the risk of postoperative complications. These elements are essential for clinicians who want to elevate their practice and achieve consistently successful implant outcomes.

The Foleck Center emphasizes that the course will be highly interactive for those attending in person, allowing doctors to engage directly with Dr. Foleck during the procedure and throughout the instructional segments. In-person attendees will also enjoy the convenience of a provided lunch, offering additional time for professional networking and collaboration. The center believes that fostering connection among clinicians enhances the learning experience and strengthens the broader dental community. Doctors from a range of backgrounds and levels of implant experience are expected to attend, creating a dynamic environment where participants can share perspectives, discuss clinical challenges, and build supportive professional relationships.

Virtual attendees will also have access to the full educational content, with the livestream engineered to maintain exceptional clarity and detail. The Foleck Center has invested in high-quality audiovisual systems to ensure that remote participants can clearly visualize the surgical field, follow the sequence of instrumentation, and listen to Dr. Foleck?s explanations with crisp audio. Although they will not be physically present in the operatory, virtual attendees will still receive the core instructional benefits that make live surgical training so valuable. The hybrid model is intended to accommodate the needs of busy practitioners, distance learners, and those who prefer to participate from their own office or classroom setting.

Registration for the December 13 course is now open, with the live attendance option limited to the first twenty-six doctors who secure their spots. Both live and virtual participants can register by emailing Dr. Foleck directly at adam@thefoleckcenter.com. Given the high level of interest and the strict cap on in-person seats, early registration is encouraged. The Foleck Center anticipates that the event will reach capacity quickly, and many doctors have already expressed excitement about the opportunity to learn from Dr. Foleck?s expertise in a real clinical environment.

The value of live surgical continuing education cannot be overstated for clinicians who seek to master dental implantology. Implant dentistry is a discipline that requires precision, sound judgment, and an understanding of subtle technical nuances. Textbooks and diagrams can provide foundational knowledge, but seeing a

surgery performed by a highly experienced practitioner offers a depth of insight that is difficult to replicate. Observing an implant procedure in real time allows clinicians to internalize the fine details?how the surgeon handles tissue, how instruments are angled, how decisions are adjusted moment to moment?that make the difference between standard results and excellent ones. The December 13 program is designed to bridge the gap between theory and practice, giving clinicians the opportunity to witness excellence up close.

The Foleck Center looks forward to welcoming attendees and delivering an enriching educational experience that strengthens clinical skills and expands professional horizons. The center remains committed to advancing the field of implant dentistry through exceptional training, hands-on mentorship, and educational opportunities that inspire confidence and mastery in practitioners. Dental surgeons who attend this course will gain not only technical knowledge but also a deeper understanding of the clinical philosophy that guides successful implant treatment.

Founded on a dedication to patient care, clinical excellence, and ongoing professional development, The Foleck Center is recognized as a leader in advanced dental services in the Norfolk area and beyond. Under the direction of Dr. Adam Foleck, the center continues to provide comprehensive dentistry supported by state-of-the-art technology and a team committed to delivering outstanding results. Through continuing education initiatives such as this live implant training, The Foleck Center affirms its role as a resource for dental professionals seeking to elevate their skills and stay ahead in a rapidly evolving field.

For additional information about the December 13 event or to reserve a place for either the live or virtual session, interested clinicians are encouraged to contact Dr. Foleck at adam@thefoleckcenter.com.
