

Solarban WA Expands Advanced Car Window Tinting Services as Perth Faces Rising Heat and UV Exposure

December 05, 2025

December 05, 2025 -
Solarban WA, a Perth-based window tinting specialist operating since 1995, has expanded its advanced car window tinting services to address increasing concerns about heat and ultraviolet radiation exposure affecting drivers throughout the metropolitan area.

The expansion comes as Western Australia experiences intensifying summer temperatures and year-round UV radiation levels that consistently rank among the highest in the world. The company's enhanced service offerings include advanced films that block up to 99 percent of harmful UV radiation while reducing interior vehicle temperatures by up to 60 percent.

"Perth drivers face unique challenges with our climate, particularly those commuting during peak afternoon hours when the sun's intensity is at its strongest," said Patrick, speaking for Solarban WA. "Our expanded services address these concerns by providing solutions that protect both vehicle occupants and interior components from damage caused by prolonged sun exposure."

The timing of this service expansion aligns with recent data from the Bureau of Meteorology showing that Perth has experienced above-average temperatures for consecutive seasons, with western suburbs particularly affected by intense afternoon sun exposure. Vehicle interior temperatures can reach dangerous levels within minutes during summer months, creating safety concerns for drivers and passengers.

Solarban WA car window tinting services now incorporate the latest technological advances in window film manufacturing, offering improved heat rejection capabilities while maintaining optical clarity. These films meet all Australian standards for vehicle window tinting and provide additional benefits including glare reduction and enhanced privacy.

The expanded services cater to various vehicle types, from passenger cars to commercial fleets operating throughout the Perth metropolitan area. Commercial clients have reported significant benefits, including reduced fuel consumption from decreased air conditioning usage and improved driver comfort during extended periods behind the wheel.

"We've seen increasing demand from both individual vehicle owners and fleet managers who recognize the long-term benefits of professional window tinting," Patrick added. "Beyond immediate comfort improvements, proper window tinting extends the lifespan of vehicle interiors by preventing fading and cracking of dashboards, seats, and other components."

The company's comprehensive approach includes consultation services to help vehicle owners select appropriate tinting solutions based on their specific needs and usage patterns. All installations come with a lifetime warranty, reflecting the company's confidence in both product quality and installation expertise.

Solarban WA specializes in window tinting solutions for homes, vehicles, and commercial properties throughout Perth. Established in 1995, the company offers a comprehensive range of services including residential window tinting, safety film installation, anti-graffiti protection, decorative films, frosted window applications, and commercial office tinting. The company has built its reputation on competitive pricing, fast turnaround times, and extensive product knowledge developed over nearly three decades of operation in the Perth market.
